SILAGE IS SUPERIOR WINTER COW FEED

SPLENDID TYPE OF JERSEY COW FOR DAIRY.

ment of Agriculture.)

Silage is a splendid winter feed particularly adapted for dairy cows. In there is butterfat produced. many sections sliage has come to be the dairy farm's main reliance for cows, for it is the best and cheapest substitute for fresh grass. While the real food and nutritive value of slinge is not great, about three-fourths of its total weight being water, it is succulent and palatable. It contains a large amount of carbohydrates in proportion to the protein and will give best results when fed with some other feed richer in dry matter and in protein. As a feed containing a large amount of Grain mixture ... water in the form of natural plant juices, it is ensily digested and serves the useful purpose of keeping the whole system of the animal in good condition. A slinge-fed animal is rarely troubled with digestive disturbances, the coat is noticeably sleek and soft, and the skin is pliable. No rough feed is more palatable than good corn slinge, which is of great importance in feeding dairy cattle as it induces a large consumption and stimulates the secretion of digestive juices.

Feeding Leguminous Hay.

Leguminous hay such as clover, cow peas or alfalfa should be fed in combination with silage. These will tend to correct the deficiencies of the sliage in dry matter, protein and mineral constituents. A ration of sllage and, say, alfalfa bay alone is satisfactory, however, only for cows which are dry or giving only a small amount of milk and for heifers and bulls. Cows in full milk require some concentrated feed in addition to hay and sllage, as they cannot consume enough of these feeds to keep up a large flow of milk and maintain body weight.

Amount to Feed.

The amount of slinge to feed a cow will depend upon the capacity of the Besides, the milk may receive some animal to consume feed. She should taints directly from the stable air. On be fed as much as she will clean up the other hand, if feeding is done subwithout waste when consuming it sequent to milking, the volatile slinge with her hay and grain. It will The hay will ordinarily range between tempt them to break the speed laws 5 and 12 pounds per cow per day when and their fines will pay for the road. fed in connection with silage. For Holsteins 1 pound of concentrates for each 4 pounds of milk produced will prove about right. For Jerseys 1 pound for each 3 pounds of milk or less will come nearer meeting the requirements. The

(Prepared by the United States Depart- | tween these two according to the quality of milk produced. A good rule is to feed seven times as much grain as

The following rations have been found satisfactory:

For a 1,300-pound cow yielding 40 pounds of milk testing 3.5 per cent;

pounds of 3.5 per cent milk: Pounds Silage Clover, cowpea, or alfalfa hay

For a 900-pound cow yielding 30 pounds of 5 per cent milk : For the same cow yielding 15 pounds

of 5 per cent milk:

A good grain mixture to be used in a ration which includes siluge and some sort of leguminous hay is composed

In case the hay used is not of this kind some of the corn chop may be replaced by linseed or cottonseed meal. In many instances brewers' dried grains or crushed oats may be profitably substituted for the bran, and oftentimes gluten products can be used to advantage in place of bran or oil meals. Time to Feed.

The time to feed slinge is directly after milking or at least several hours before milking. If fed immediately before milking the silage odors may pass through the cow's body into the milk.

Many objections have been made to the feeding of slinge, some condenseries even refusing to let their patrons done with the chain stitch."—Balti- a perfect idiot."

use it. These objections are becoming more American.

"Well, you must pay a fine of \$10 duced at once. The small breeds will use it. These objections are becoming more American. less common, since milk from cows fed silage in a proper manner is in no way impaired; furthermore there is nothing about slinge that will impair the health of the animals.

Feeding Frozen Silage. Frozen silage must be thawed before feeding. If it is then given immediately to the cows before decomposition sets in no harm will result from feeding this kind of silage; neither is Harmless to flush Kidneys and the nutritive value known to be changed in any way.

Care of Horse's Feet

Keep your horse's feet soft, and have him shod often. More feet are ruined grain for other breeds will vary be- in the stable than on the road.

Enables Farmer to Reduce Grain Ration About One-Third-Influences Laying of Hens.

Giving the hens once a day all the sprouted oats they want to eat, which is about a square inch of sprouts, grain and roots, enables one to reduce the grain ration about one-third and thereby effecting a saving in high-priced grain. Oat sprouts can be produced at about 20 to 25 cents per bushel, while the price of wheat is about \$2,20 per bushel. It is also remarkable how sprouted oats influence the laying of the hens. A change in this respect can be noticed within a few days after sprouted oats have been fed.

INDICATES GOOD LAYING HEN

timers used to say, "the bigger the hay may be saved.

FEED FOWLS SPROUTED OATS | comb, the better the layer," and there is a great deal of truth in it. Notice the large comb of the black Minorea, one of our very best layers, and the layer of the largest egg of any breed. Notice the large combs of the Leghorns, the best of egg-layers. Put it down as an axiom of truth that a hen with a large comb, and a bright red comb, is a good layer.

AVOID POORLY KEPT SILAGE

Sheep Are Peculiarly Susceptible to Moldy Feed-Oats and Bran Are Excellent.

Sheep are peculiarly susceptible to injury from moldy feed. Poorly kept injury from moldy feed. Poorly kept longer is a source of irritation to the silage is therefore to be avoided. In Perfect Accord.

Buttonheled by an overinquisitive journalist, a British cabinet minister administered a neat rebuke.

"How long do you think the war will last?" was the final question of a long series, asked the interviewer.

Very promptly the minister asked; 'How long is a piece of string?" The interviewer stared at him in astonishment.

"I—I don't know," he gasped.
"Neither do I," said the minister, cordially. "I'm glad we've agreed about something. Good morning."-Exchange.

neutralize irritating acids.

Kidney and Bladder weakness result from uric acid, says a noted authority. The kidneys filter this acid from the blood and pass it on to the bladder, where it often remains to irritate and inflame, causing a burning, scalding sensation, or setting up an irritation at the neck of the bladder, obliging you to seek relief two or three times during the night. The sufferer is in constant dread, the water passes sometimes with a scalding sensation and is very profuse; again, there is difficulty in avoiding it.

Bladder weakness, most folks call it, because they can't control urination. While it is extremely annoying and sometimes very painful, this is really one of the most simple ailments to overcome. Get about four ounces of Jad Salts from your pharmacist and take a tablespoonful in a glass of water before breakfast, continue this for two or three days. This will neu-tralize the acids in the urine so it no
