One Spot Was All Right. Robert was promised a nickel by his aunt if he kept clean when he went out to play, as company was expected and they wanted him to look his best. The tiny chap, however, got into a coal pile and was a sight to behold. His aunt said such a dirty boy would not get the nickel. Wistfully pulling out the lining of his wee pocket he said: "My pocket is clean, anyhow."

Admitted He Said Something. A fine distinction was drawn by a man in the names he had called a neighbor. In a suit before the London-derry assizes one of the defendants denied calling the rector a thickheaded old fool, but admitted calling him a pig headed humbug.

History of Freedom of Speech. The issue of free speech is really modern, and emerged clearly as a defensible proposition only with Milton's Areopagitica, to be followed by the widely divergent reasoning of Jeremy Taylor and Joseph Glanvil, and by Locke's classical first "Letter on Toleration" (1689), which says almost the last word on the matter so far as religious differences are concerned.—James H. Robinson in Atlantic.

EGGS PRESERVED FOR WINTER USE

Work Should Be Performed in Spring When There Is Surplus on Most Farms.

WATERGLASS SOLUTION BEST

Earthen Crocks or Jars Are Preferred as Containers, as Glazed Surface Prevents Chemical Action—Other Methods.

(Prepared by the United States Department of Agriculture.)

Spring is the season when there is a surplus of eggs on most farms. For this reason it is desirable that a supply be preserved at home to be used next fall and winter when eggs are hard to get and are high in price. There are several methods of preserving eggs which have proven very successful and which, because they are cheap, simple, and effective, should be put into practice more extensively.

Eggs to be preserved must be fresh, and should be placed in the preserving container as soon as possible after they are laid. One of the best methods of preserving is by the use of waterglass, a pale yellow odorless, sirupy liquid than can be bought by the quart or gallon from the druggist or poultry supply man. It should be diluted in the proportion of 1 part of waterglass to 9 parts of water which has been boiled and allowed to cool. Earthenware crocks or jars are the best containers, since their glazed surface pre-

vents chemical action from the solution. The crocks or cans should be scalded and allowed to cool before they are used.

Half fill the container with the waterglass solution and place the eggs in it. Eggs can be added from day to day as they are obtained, making sure that the eggs are covered by about 2 inches of waterglass solution. Cover the container and place it in a cool place where it will not have to be moved. Look at it from time to time, and if there seems to be danger of too much evaporation, add sufficient cool boiled water to keep the eggs covered.

Lime-water also is satisfactory for preserving eggs and is slightly less expensive than waterglass. A solution is made by placing 2 or 3 pounds of unslaked lime in 5 gallons of water which has been boiled and allowed to cool, and allowing the mixture to stand until the lime settles and the liquid is clear. The eggs should be placed in a clean earthenware jar or other suitable vessel and covered to a depth of 2 inches with the liquid. Remove the eggs as desired, rinse in clean, cold water, and use immediately.

GARDEN IS MOST IMPORTANT

Essential as Food Supply and as Means of Reducing Living Expenses This Year.

The garden will be even more important as a food source and as a means of reducing living expenses this year than last year. The experience of last year will be a valuable asset toward a better garden for the coming season. A small garden will produce more food than an acre of ordinary farm crops. Last year the United States became a nation of gardeners. That reputation must be maintained. Every farm must have its home vegetable garden, and every foot of vacant land in the cities and towns should be planted to food crops.

First Feed for Calves. Two quarts of warm fresh milk, morning, noon and night, usually make a proper allowance for the first week or ten days of a calf's life.

Japanese millet produces a good size head and consequently carries considerable seed.
