Here's the MOST Economical Dust you can use to Control Wheat Smut...

Any way you look at it, New Improved CERESAN is the most sensible and economical treatment for seed wheat! It saves money—costs under 3c an acre at average seeding rate, less than any other dust. It saves time and labor; can be applied by gravity treater. Saves drill breakage, too, for it does not clog. The U. S. Dept. of Agriculture recommends this dust for effective stinking smut control. Use it, for bigger yields! In actual farm tests the average increase has been 1.13 bushels an acre on clean seed; even more on smutted seed.

On barley, 4c an acre pays for New Improved CERESAN treatment and saves you losses from covered smut, black loose smut, stripe, seedling blight. Ask your dealer or write today to Bayer-Semesan Co., Inc., Wilmington, Del., for free Cereal Pamphlet 102-C
