ternational.

Wasco and Moro came out fifty-fifty in their athletic contests last Thursday. Wasco won the football game by a very large score. Moro being new to the game was slightly at a disadvantage but held up their spirit. The score was 36 to 2.

The tables were turned that night when Moro conquered the Wasco girl volleyball team by a substantial score. After the volleyball game a dance was held by the junior class for the freshmen as a welcome dance. Wasco was invited and many Grass Valley young folks came down to make a large crowd for a high school dance.

The school underwent a minor change this week end when the seats in room six were put in the typing room and the typing equipment was transferred to room six.

The change makes it more satisfactory for teachers and pupils.

Nellie Futter came to school for the first time this year. She is recuperating from a broken leg received during vacation.

The band is receiving new music every day which they will practice in the coming months.

Crested Wheat Grass Seed Short

"As crested wheat grass seed is not available in unlimited quantities, it appeared that only those who were able to obtain supplies would be able to use it. The extension service located available seed supplies in all states where crested wheat grass is being grown, and growers ordered practically all of the seed offered. As a consequence, Oregon now has on hand enough seed to boost the present acreage more than 17 fold."

Of all the many new grasses introduced into Oregon by the state college experiment station and extension service, crested wheat grass has proved to have by far the most advantages for large-scale production over a wide area. It is a long lived perennial bunch grass, highly drought resistant and able to withstand other adverse conditions, such as cold weather and heavy grazing.

Crested wheat grass starts growth at a lower temperature than other cultivated perennial grasses, thus making earlier pasture. Owing to its early spring growth and extensive root system, it has the ability to compete successfully with weeds, both while becoming established and afterwards. Its excellent growth and extensive fibrous rooting system makes it ideal in checking both wind and water erosion.
