

Sherman County Journal

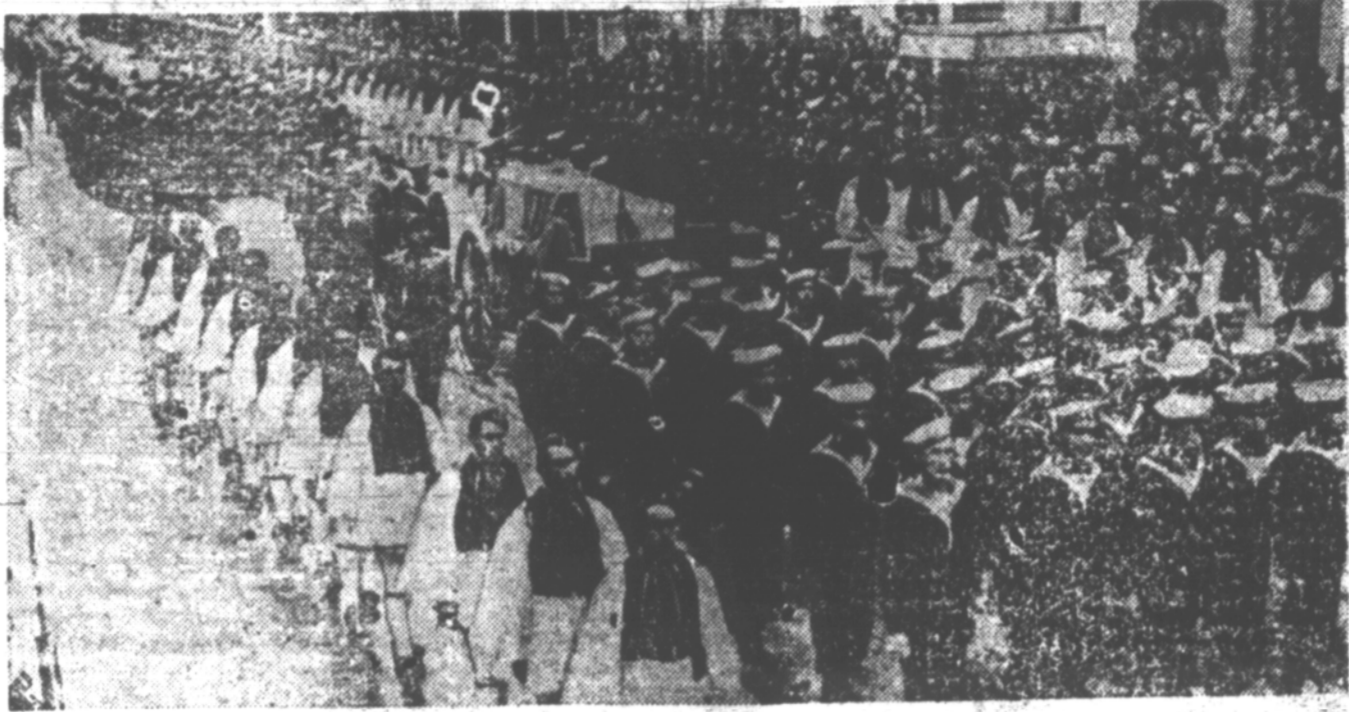

SHERMAN COUNTY OBSERVER. Established Nov. 2, 1888. GRASS VALLEY JOURNAL, Established Oct. 14, 1897. CONSOLIDATED, MARCH 6, 1931. WASCO NEWS-ENTERPRISE, Established 1891. CONSOLIDATED MARCH 4, 1932.

Entered as second-class matter at the Postoffice, at Moro, Oregon, under Act of Congress of March 3, 1879.

SUBSCRIPTION RATES—PAYABLE IN ADVANCE. One Year \$1.50 FEBRUARY 5, 1937

Royal Exiles of Greece Are Buried at Home

Procession seen winding through the streets of Athens, Greece, recently, as the remains of King Constantine, Queen Sophia and Queen Olga of Greece, who died in exile were borne to the royal mausoleum at Tatoi near the capital. Twenty princes and princesses of the royal family, as well as church dignitaries, statesmen and diplomats were in the procession.

PINBALL MACHINES

The pinball machines that have attracted customers and public interest for the past few years are now definitely out of commission. A circuit judge recently ruled that they are lotteries and lotteries are forbidden by the Oregon constitution.

Probably the recent decision of the circuit court declaring pinball machines a lottery and therefore excluded by the constitution, had something to do with it, but regardless of that, no session of the legislature is ever quite complete without a few bills having to do with gambling in some of its many forms.

There are or have been attempts to legalize gambling after a fashion by charging license fees to machine operators and then, the state takes a rake-off on the horse and dog races. Some want to give cities and towns the right to license gambling devices.

SNOW SNOW SNOW

Old timers who tell of the winters of their youth when the snow reached the eaves and the fences were hidden from sight will have to admit that this winter rates very well as a bringer of snow.

There is a better prospect for successful crops than for several years and the effect of the prolonged storm should last for a number of crops by raising the water level in the ground.

TRUCKS

An interim committee that has been studying the highway problem in this state has made its report and given its conclusions to the public in the form of a pamphlet crammed full of information and opinions.

Conclusions are that road use should determine road taxes, a principle that has been accepted for years in this state: that passenger cars are subsidizing trucks because road wear is caused 34 per cent by trucks whereas they only pay 27 per cent of the taxes for road purposes; that the ton mile basis is the proper one for trucks.

State budget officials with their million dollar deficit and surplus resemble a small boy and his jack knife. He loses it every day and finds it as often. However, many citizens will wonder what kind of a system of bookkeeping is used that makes it possible to get all kinds of answers out of that 200 page volume called the budget.

Negro Joe Louis had better lose another bout pretty soon if he wants to continue to attract a profitable gate.

GAMBLING

There is something of a to do being made down at Salem by the reformers who wish to do something to take the gambling instinct from the human race and those furtive gentlemen who like to wager or to have others wager for a profit.

There are or have been attempts to legalize gambling after a fashion by charging license fees to machine operators and then, the state takes a rake-off on the horse and dog races. Some want to give cities and towns the right to license gambling devices.

THE GROUND HOG

If the ground-hog who only theoretically lives in these parts was doing a proper job of sleeping he would not have awakened at all on his annual day to seek, and find, the sunshine.

It is not the ground-hog tradition that gives some hope to those who hope that the winter has spent its strength, but the fact that a full month of cold, windy and snowy weather has been finished. This period is longer than any other such period within the memory of most of the residents and it is likely that the ground-hog will be right if he prophesies warmer and more pleasant weather.

British Columbia is the first "civilized" country to make a start toward a public health plan. India and China it is said, have followed this practice for many years.

After all these years some humans have eaten a lion. Think of the humans the lions have eaten. Certainly the lions are ahead in the deal.

STATEHOUSE GOSSIP

For once the Oregon schools won a basketball series from the University of Washington.

It is either a feast or a famine as regards moisture in this country. Back in the east the fields that were parched last summer are now giving tons of water to fill the flood ed rivers and right here at home where snow has been a joke for years it is piled higher than for years.

The General Motors corporation is in bad with teachers, because it wouldn't mind.

A bill by Hyde of Lane county which has already passed the House would make voting more convenient for residents of isolated sections of the state. It provides that persons living more than ten miles from a polling place may avail themselves of the absentee voter privilege up to the day before election.

In Other Days

From the Observer Feb. 6, 1918. The double header basketball game last Friday between the boys and girls high school teams of Wasco and Moro was both tuckered away by the Moro teams for safe keeping by a score of 25 to 5 for the boys and 4 to 3 for the girls.

Just to satisfy himself that his conclusion and observations of weather conditions were right, L. L. Peetz sunk some test holes in his fields last Saturday with the result of finding that the frost line was close to seven inches deep.

A letter from P. Waldo Davis who has been in Portland several weeks, says that he is kept fully occupied in furnishing musical entertainment at church affairs, banquets, and different meetings held in the interest of securing funds for relief measures.

Dr. C. P. Wilson of Shaniko and Miss Essie C. Wilson, of Kent, were married at the Moro hotel parlors by Rev. A. J. Adams, Wednesday, February 5th.

R. P. Hulse and George E. Lewellen are in Wasco this week helping to invoice the stock of Webber & Co., which was recently purchased by W. E. Laidlaw of Portland.

Albert Miller has disposed of his interest in the burned Elrod brick to Judge E. V. Littlefield and L. Barnum who will immediately begin to arrange for the rebuilding of the burned brick.

The residence of J. B. Murray was paid a close visit by the fire fiend Saturday evening. Clothes hanging in the kitchen to dry were found as if they were put out before serious damage was done to the room.

Mr. and Mrs. Wm. Henrichs entertained 30 guests Saturday evening, playing whist. Mrs. Robert Urquhart and E. H. Moore captured the first prizes and Mrs. Walter Rutledge and Wm. Morrison the consolation prizes.

Young Farm Animals Treated Easily

Some of the most common diseases of young farm animals may now be easily controlled as a result of the discovery by Dr. J. N. Shaw and Dr. O. H. Muth of the Oregon State college veterinary department that acidophilus milk will control lamb dysentery and calf scours.

This treatment was first explained to livestock men of the state a year ago and proved so immediately successful that the facilities of the department were taxed in supplying the demand for this special milk. As no other source is available, arrangements have now been made for it to be prepared by the dairy department at the college, and it is believed that enough can be made at cost to supply the demand.

Acidophilus milk, so named because it is first sterilized and then inoculated with Lactobacillus, acidophilus bacteria, had previously been used for treating babies afflicted with dysentery, but so far as known it had never been used for similar maladies in young animals until tests were started at O. S. C.

Dr. Shaw recommends giving calves an 8 ounce dose as a drench and lambs either one ounce as soon as dropped as a preventive, or two ounces after the disease appears. In the latter case the dose is repeated at intervals of 12 to 24 hours until the symptoms disappear.

Lad—Your car is at the door. Dad—I heard it knocking.

Syphilis Curable If Treated At Early Stage

Syphilis, though in every sense one of the most serious of all diseases, is robbed of many of its terrors by the fact that it may be early and surely recognized and, with considerable certainty, cured. Gonorrhea, on the other hand, though a disease with the gravest complications, is a disease that often escapes recognition, and its cure, even if possible, is extremely difficult and troublesome.

The popular notion that the reverse is case and, that though syphilis is to be regarded lightly, is so false and wide spread that the facts demand general publicity. Informing of the public is the first fundamental need in the fight to prevent venereal diseases. Success in eradicating any communicable disease depends on the public backing which it is able to command.

A large part of the failure to control venereal diseases heretofore has been due to public ignorance and fear of free discussion. Now that the ban on mentioning the unmentionable has been removed, we can speak freely of venereal diseases, calling the diseases by their names. Syphilis is syphilis, and gonorrhea is gonorrhea. No longer can these diseases be considered simply as a problem of morals. Syphilis cannot be dealt with by calling it a sin. The truth is that there are a multitude of cases in which no sin is involved. Many of the most pathetic victims are virtuous housewives and helpless children, or men who contracted the disease quite innocently. In other cases, the moral side should be left to the moralist and the health side should be treated as what it is—a problem of prevention and cure of disease.

Syphilis is a disease of long duration and it takes time to cure. Laboratory methods are available for the control of syphilis. The first step is the treatment of infected persons; the next step is the reporting of cases, with all data concerning date of infection, source of infection, and contacts. The case must be kept under observation and continuous treatment. Arsenical drugs, properly administered, render the disease non-transmissible. Every syphilitic should know that he can be cured, providing the treatment is begun early. In properly treated cases the danger of transmitting the infection to others is reduced to a minimum. Therefore, if all cases of syphilis could be placed under rigid treatment, the disease could be controlled. This has been clearly demonstrated in the Scandinavian countries, where syphilis has been reduced from thousands of cases to a few hundred. This is a job for the whole people. They must support measures to provide facilities for the early diagnosis of the disease. There must be no delay in beginning the treatment; delay may mean failure. Sources of infection must be detected and treated to render them non-infectious. The family and all other contacts should be examined. Blood tests before marriage will make it possible to prevent the birth of syphilitic babies. Syphilis can be prevented if the public will support measures for the control of this really preventable disease.

Lad—Your car is at the door. Dad—I heard it knocking.

First I had tonsillitis, followed with appendicitis and pneumonia. After that I got erysipelas with hemochromatosis. Following that I got poliomyelitis and finally ended up with neuritis. Then they gave me hypodermics and inoculations. No, sir, I thought I'd never pull through that spelling test.

Mrs. B Jones—Weren't you told to watch when the rice boiled over? Hilda—Yes ma'am, I did. It was just five minutes after eleven.

Mother—What have you been doing? Johnnie—This and that, here and there, now and then.

IN THE CIRCUIT COURT OF THE STATE OF OREGON FOR THE COUNTY OF SHERMAN NOTICE OF PAYMENT OF DIVIDEND

In the Matter of the Liquidation of the MORO STATE BANK. Notice is hereby given, that an order has been entered by the Circuit Court of the State of Oregon for the County of Sherman authorizing, empowering and directing the Superintendent of Banks to distribute a third dividend of ten per cent on all ordinary deposit claims filed and approved against the Moro State Bank, Moro Oregon, to and including December 31, 1936, said dividend to be paid on and after February 13, 1937.

That said order also directed the payment of a first and second dividend on all approved claims filed from October 11, 1934, to and including October 4, 1935, which claims were filed subsequent to the payment of said dividends.

That said order also directed that this notice be given by publication thereof in one issue of a newspaper of general circulation printed and published in Sherman County, Oregon. That the date of the publication thereof is February 5th, 1937.

MARK SKINNER Superintendent of Banks, in charge of Moro State Bank, in Liquidation, Moro, Oregon
