"I'm busy just now... on NATIONAL DEFENSE!"

SOME PEOPLE THINK the steel mills and shipyards do all the national defense work. They don't stop to realize the important part that plenty of good, wholesome milk and cream plays in keeping America healthy and strong.

"I'm proud to be doing a productive job—and glad I can get all the electricity I need to help me do it!"

That cream separator is a tiny item in the nation's use of electric power, but it's typical of the thousands of efficient and economical ways in which electricity is helping to SPEED PRODUCTION throughout America.

ELECTRICITY IS READY HERE AND EVERYWHERE—as much as you want—wherever you want it—whenever you want it. Let it help you live better, produce more.

Electric Industry has network of lines ready to deliver power anywhere!

★ You read of shortages of airplane engines, ships and anti-aircraft guns. But have you ever heard of a shortage of electric power—except from somebody running for political office?

National SECURITY of the power supply has increased tremendously since 1918. America today has 4 1/2 times as much electric generating capacity as it had only 22 years ago. Thousands of miles of high voltage transmission lines have been built to interconnect power plants and power load centers.

Who did this great job? The private power companies—the much-maligned "holding companies"—they've done more than 90% of it. They have provided America with the most complete and efficient electric service in the world.

That's why America is prepared, electrically, and why Government funds and manpower can be used for OTHER defense preparations where there is an ACTUAL need.

Interconnected transmission systems make power available everywhere for today's defense needs.
