Nutrition Councils To Be Formed

Though Oregon is unusually favored in the matter of quality and variety of food products produced within its own borders, investigations have shown that the health and stamina of Oregon citizens can be materially improved by greater use of the findings of modern science in the selection and use of food in the home.

Such is the conclusion of the state nutrition committee for defense which at its latest meeting a Oregon State college arranged for a comprehensive program of activity for county nutrition councils for defense which will be organized soon.

State and county defense nutrition committees have been charged with the duty of contributing to what is now known as total defense in this country. While at first defense was considered to be concerned largely with military man power and war equipment, the present total defense plan includes industrial defense and food defense, the committee points out.

Each council will include such officials as the FSA home supervisor, the county nurse, if any; the home demonstration agent, representatives of the Smith-Hughes work in high schools, the county school superintendent or rural supervisor, and representatives of the Red Cross, PTA and leading farm organizations. Following are the objectives agreed upon toward which the county councils will work:

- 1. To coordinate the efforts of all organizations within a county on nutrition problems.
- 2. Through a united effort in education to reach all people in the county to the end that their health and welfare will be improved.

I sent the first stanza to the editor of the correspondence column with the inquiry, 'Can anyone give me the rest of this poem?' A few days later I sent the rest under another name.
