Depend on INTERNATIONAL CRAWLERS For Productive Power

● Plenty of pulling power here! That's because International Crawlers are better balanced. Every pound of weight is placed for maximum traction. That means more power at the drawbar.

International Diesel engines are misers with fuel. They're designed to get maximum power from every ounce of fuel consumed. Easy, instant-starting means that these engines are ready to go at a moment's notice.

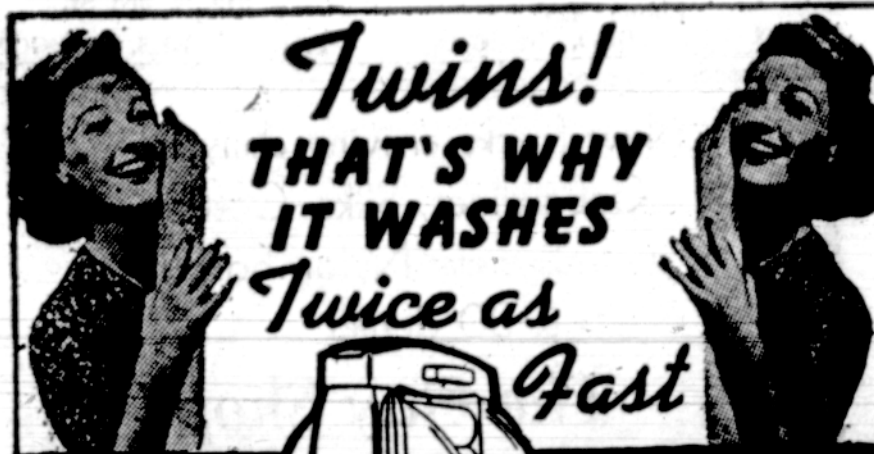

These are a few reasons why many farmers and ranchers say, "My International has more power than other tractors of its size."

Stop in and see us for complete information on International Crawlers. We also handle a complete line of Dyrre Tillage Tools to fit your farm or ranch requirements.

What! A Power Plant on Top of a Pole?

Yes, sonny, capacitors are in effect little power plants, because they boost the supply of usable electricity on power lines. This year Pacific Power will install 1600 capacitors on pole tops throughout its system. These ingenious little devices will make available about 10,000 kilowatts of additional capacity from existing generators.

THIS GROWING REGION USES MORE AND MORE OF PP&L'S CHEAP ELECTRICITY!

Electric rates here are the lowest in history—less than half the national average
