HOW YOU GET YOUR TELEPHONE ADDRESS
Your number guides a call to you from across the nation almost as quickly as you can walk next door
1. Your voice highway—a pair of tiny wires—is labeled with your telephone number at this central office distributing frame. From here, the wires lead out of the office, through cables, to your telephone. They also go the other way—on into a special section of complex equipment that has the specific job of handling your calls.
2. Picking your number is a job for trained people. From their charts they find an available pair of wires in a cable to your neighborhood. The volume of calls carried by the central office equipment serving your number is often checked to see if it has the capacity to handle added calls. This is part of our job of making telephone service reliable and efficient.
3. Someone calls your number... and, in a matter of moments, you pick up your receiver to answer. Perhaps the call is from just across the street. Perhaps it comes half-way around the earth. But your number guided it to your telephone... and no other. Seems almost like magic when you think of it... another of the little things that add up to good telephone service for you.
4. A lot of new numbers have been added in the past few years. For today there are twice as many telephones in use on the Coast as ten years ago. All these new telephones make yours more valuable. You can reach more people... more can reach you. Yet rates remain low. A few pennies still buy a call—a real value in these days of high prices.
