"What do you do with all the money you make?"

Standard's income sometimes raises such comments as: "You people do a lot of business. You must be rolling in dough. How about answering this one—What do you do with all the money you make?"

The answer is a matter of public record. But in brief—after we've paid for materials, wages, employee benefits, and miscellaneous expenses... wear and tear on plants and equipment... interest on our long-term debts... and, in the last 5 years, more than \$405,000,000 in taxes—then what's left, the "money we make," goes this way:

Exploration here and abroad has cost us more than \$229,000,000 in the last 5 years. Known crude reserves are at an all-time high. But these deposits were the easiest to discover. Though the earth holds vast hidden reserves, it now costs many millions to find each new field.

And finally, after setting aside funds for future operation, our more than 100,000 shareholders get what money remains—last year \$2.60 a share, their return on savings invested in Standard. So almost all the "money we make" goes right back into circulation.

We invest in research and technical service—more than \$35,000,000 in the last 5 years—to develop better ways of finding oil, increasing the yield, cutting costs, creating new business. That brings you new and improved products, with prices held down as we compete for your patronage.

We put funds into facilities—in the last 5 years, more than \$64,000,000. The need for oil products keeps growing. Standard must replace old wells, increase crude oil production; add to the capacity of refineries, pipelines, tankers, and other things needed to serve you well.

Not "warmed over" but strictly brand new!

YOU own it to your pocketbook to drive this Chrysler engine before you buy any fine car today.

It's not a "warmed-over" engine, but a basically brand-new one!

It gives a new kind of performance that means new value for every dollar you pay out for purchase, upkeep, or operation.

It was built brand-new around a hemispherical combustion chamber which makes better use of gasoline, and also permits sounder all-round engine structure, than any American motor car engine has had before.

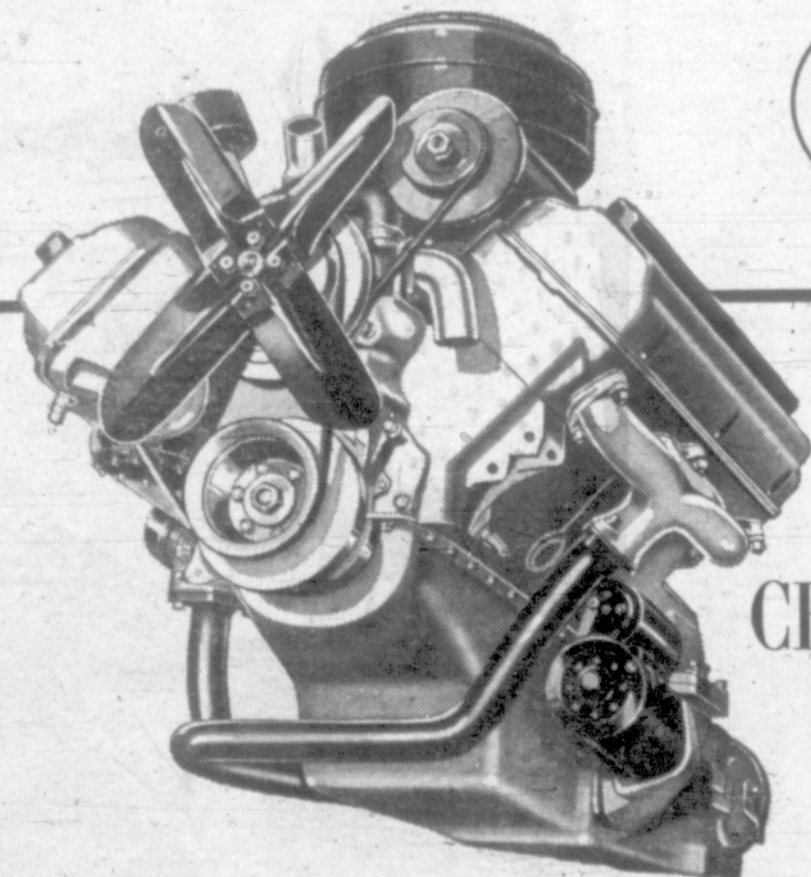

It delivers 180 horsepower... without requiring you to buy premium gasoline. It runs with less waste, less heat, less friction and less wear than previous designs can

equal. Its combustion is so clean it literally develops almost no carbon deposit at all.

It will last longer than any engine you've ever known. It will cost you less along the way. It will stay "young" in performance thousands of miles past the point where an ordinary engine shows old age.

And on top of all that, it makes driving a lot more pleasure! Its smooth response... its safety-power, in reserve for emergencies... its easy scorn for distance or hills... make you just plain feel good at the wheel as you've never felt before.

For the good of your purse and your pleasure too... we invite you to drive it, soon!
