Shallow Drilling of Soak-In-N Pays Off for Grain Growers

Warren Wilkinson Says

DID YOU KNOW THAT: (1) According to the California Bureau of Chemistry, California growers used more than three times as much aqua ammonia (20-0-0) the first 9 months of '54 compared to the same period of '53? (2) The rate of increase was 26 times that of any other non-solution type of nitrogen fertilizer? (3) At the same time, Aqua jumped from 5th to 2nd place in total tonnage? Shows what can happen when you take the lift and lug out of fertilizer handling with low-cost fertilizer simples-in-solution. I like to tell my customers that "with Brea Aqua you don't lift anything heavier than the end of a two-inch hose!"

OUR DRILL APPLICATION RIGS are doing a nice job for customers these days, and naturally we are well equipped and ready to handle more customer acreage. Things are happening so fast in the fertilizer business that I know we can save you money and do a better job if you will let us bid on your nitrogen needs.

GROWERS WHO OPERATE their own application equipment have found that "One-Man-Handling" per tractor, with Brea Aqua, soon pays the cost of changeover. With high-speed transfer pumps to refill applicator tanks in a few minutes, it no longer takes two men to keep a rig rolling. Many Brea growers handle equipment modification in their own shops.

More and more local grain producers are boosting yields and profits with Brea Aqua Ammonia... low-cost, high performance nitrogen-in-solution. Brea Aqua is a "natural" for grain. It combines easy, mechanized fluid handling with shallow drill application which soaks nitrogen into the soil at just the desired number of pounds per acre.

Brea's Agricultural Technical service offers these recommendations for dryland grain: Vary the application rate with average rainfall expectancy as follows. In California: 8-12 inches of rain-30-40 lbs. N per acre; 12-18 inches of rain-40-50 lbs. N per acre; 18-24 inches of rain-50-60 lbs. N per acre; and above 24 inches of rain-60-75 lbs. N per acre. In Washington and Oregon: 8-15 inches of rain-30-50 lbs. N per acre; 16-23 inches of rain-50-70 lbs. N per acre; above 23 inches of rain-70-90 lbs. N per acre. Soil tests are recommended to determine phosphate requirements.

For more information and assistance in planning your nitrogen and phosphate schedules-call us today. We'll be happy to show you how Brea Aqua pays for itself over and over again. You'll like our prompt service, low cost, per pound of nitrogen applied convenience in handling and the exceptional results.

Just call us and we'll come out and show you how Brea Aqua Ammonia can make more money for you.
