**NEW DEPRECIATION PLAN NEEDED IN TAXES**

Vitally needed depreciation tax reform could do much to take workers from the unemployment lines and put them on the production lines, the Chamber of Commerce of the United States asserts.

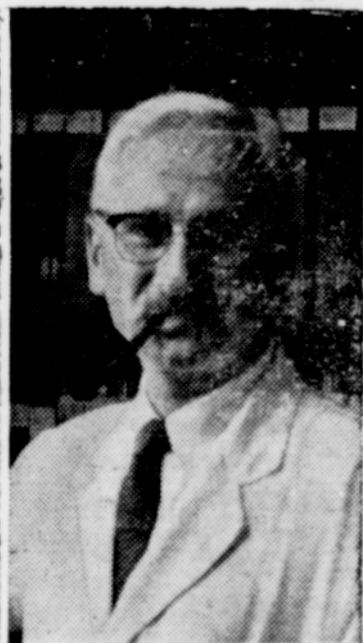

New jobs are needed now. During the next few months, economists are predicting that unemployment will rise to between 4.5 and 5 million. But one of the most backward government tax depreciation programs in the world hampers the U. S. in fighting the business slump. Reform could help.

Men and women make the machines that industries buy. So it is simple to understand that when businesses buy machines, there are jobs for the people who make the machines. In addition, jobs are created for the people who run the machines.

Under the present depreciation program, businesses recover a relatively small part of their investments each year. If allowed to recover a larger part each year, money would be more readily available to businesses; they could buy more and better machines.

Over the long run, according to economists, business firms would pay at least as much in taxes to the U. S. Treasury. Probably the National Chamber says, because of increased production, they would pay more.

So depreciation tax reform makes good sense—there would be more jobs for more people.
