IT DIDN'T COST THAT MUCH TO BE SICK WHEN I WAS A LITTLE GIRL!

OH, BUT ACTUALLY, SICKNESS COSTS LESS TODAY—AND MANY MORE CHILDREN GET WELL!

Back when today's adults were growing up, one out of every ten babies died before its first birthday. Now, advances in medical science are saving millions of young lives each year. Yet the cost of the better medical care available today is actually less than the best care you could get when you were a child!

The reason: new treatments and new medicines developed by the medical profession and the pharmaceutical industry.

A dramatic case in point is mastoiditis in children. Surgery was often able to save the child's life, but sometimes left him with a deaf ear. Nowadays, the doctor is often able to cure him with perhaps \$25 worth of potent new medicines, and thus save the expense of an operation and hospital stay.

But most important, these new drugs are saving children's lives—by the millions. Once, the four most deadly child-killers were diphtheria, whooping cough, scarlet fever, and pneumonia. Nowadays, the number of deaths from all of these causes combined is actually less than the number of children killed by accidents.

And medical progress continues. Today, the dollar you spend for prompt and proper medical care buys more than ever before—and may well represent one of the really extraordinary bargains of your life.
