Prices at roadside stands may change less frequently than those at retail markets. This can be an advantage or a drawback. Some roadside markets, not directly connected to a growing area, purchase produce through wholesale outlets the same as retail stores. Price tags found at these types of stands often compare closely with those of local food stores, she says. But, in some cases, they may be higher because shoppers, swayed by the outdoor atmosphere, feel they are receiving fresher produce and are willing to pay a little extra. Produce on roadside markets should be kept cool and shaded at all times. Most fresh fruits and vegetables lose quality if exposed to sun and heat for any length of time. Look for signs of careful management—trimmed produce, orderly grounds and clean containers. Does it appear that produce is harvested to assure rapid turnover from field to shopper? When comparing roadside and store prices, consider cost of trimmed and untrimmed produce. All prices should be clearly marked. Ideally, roadside charges should

Superior handling

One of Cadillac's most appreciated qualities has long been its extreme maneuverability for a car of such stature. A current example of this emphasis on handling ease is a new 1961 front end suspension system which permits a turning diameter importantly less than any other car of comparable wheelbase. Cadillac's superior handling ease quickly becomes evident behind the wheel—as does the incomparable seating comfort you enjoy as driver of the "car of cars."
