Mr and Mrs Collis Moore went to Coos Bay for a meeting of Republican women at which Mrs. Moore was to give a talk. They will stop in Salem on the way home.

### State Committee Says Farmers Hurt

The 1962 report of the senate interim committee on agriculture compiled and edited by Cecil Edwards, secretary, has some ominous warnings to the economy. According to the report the cost of production has become disproportionately high when compared to farm income.

The report states that production expenses to produce \$412.6 million in cash crops last year were \$341.7 million. This means the farmer had to put up \$3 for every dollar in salary he received. Total net income from all sources provided an average salary of only \$2650 for each of the 45,000 farmers in Oregon.

The interim committee report also singled out tax increases as a strangling situation to many Oregon farmers. Taxes do not fluctuate with farm prices, and as production costs rise and prices remain relatively low, many segments of agriculture are suffering.

Edwards points out a survey made in Benton county in 1960 which showed 42 farm sales with only eight being purchased by bona fide farmers. The rest were purchased by out of state buyers for tax refuges or hobby farms or country estates.

In another survey 16 Benton county farms averaging 428 acres and considered above average operations for the county were sampled. The total taxable cash value of the 16 farms was judged by the Benton county assessor to be \$1,546,948. The survey summary disclosed that this investment provided about 19 jobs, including 16 of managerial class, with an average pay rate of \$1.48 an hour. The survey also showed a combined operating loss of \$25,069 for the 16 farms.

Another problem worthy of mention in the high cost of farming is that farmers have been borrowing more heavily in the past ten years. Proof of this is shown in the report stating that farm mortgages in 1950 came to \$114.5 million, over a 100 per cent increase.

To those who believe the government is keeping farmers in business through subsidies, it is interesting to note that only \$10.3 million of the \$412.6 million in cash crops came from government payments, less than 1 of one percent.

Somebody once said the farmer is the residual claimant, meaning there is no way for him to raise his prices when costs are passed down the line. It is possible to put him out of business and when this happens, the entire economy suffers.
