The bunchgrass on the hills reminds us old timers of early days, by its extraordinary length and luxuriance. It is a pretty sight to see it waving like fields of grain; in many pastures, where it has not been eaten off during the spring, it is two feet high and as thick as the bristles on a hog.

Inland Empire Fights Jim Hill Mustard.

This is not a time to start an argument as to the rise of Jim Hill mustard in The Inland Empire; it is here, and seemingly it has come to stay, unless every city, hamlet, town and village, county officials, and farmers, get into the work of fighting it, early and late, as was done with Russian thistle. It does no good to sit down "and talk it over; work, and lots of it, is what is needed; the local granges, the farmers unions, the railroad, all along its right of way; must pull together for the common interest, and it is little short of criminal to not do so in emergencies like this and let the county be over run in a short time unless good hard work is done through concert of action, to prevent it. Moro should start the good work at home, at once, by appealing to the council to see to it that all property owners are compelled to keep their lots and lands clean and clear of every variety of noxious weeds.

To offset this the district has a new \$12,000 brick building and school furniture valued at \$1,500.

To Protect Live Stock from The Flies.

The Kansas Agricultural college having experimented with various chemical formulas to repel flies from live stock, recommends the following: Resin 1 1/2 lbs, laundry soap two cakes, fish oil 1/2 a pint, water to make three gallons. Dissolve the resin in a solution of soap and water by heating, add the fish oil and the rest of the water; apply with a brush. If to be used as a spray add 1/2 a pint of kerosene. This mixture will cost about 7 or 8 cents per gallon and 1/2 a pint is enough for one application for a cow. At first it may be necessary to use two or three applications per week until the outer ends of the hair become coated with the resin; after that, to retouch those parts where the resin is rubbed off will be all that will be necessary.
