THINGS YOU FORGET

The Studebaker Series '18' car is an evolution and perfected piece of mechanism. That is why you can FORGET many little things about Studebaker that you have to REMEMBER and care for on other cars not so highly developed.

For instance: the cooling system of the Studebaker car will work in any climate, at any temperature, provided you keep water in the radiator.

The lubrication system of a Studebaker car will work unflinchingly in absolutely all conditions, if you will remember to put oil in the crank case occasionally.

The electric lights, and the electric starter will never fail you if a little distilled water is put in the battery from time to time.

You will not have to paint your body frequently to keep it looking nice, because Studebaker's finishing work is the sum-of-years-of-experience.

You won't have to renew the leather on your cushions, because experience has taught Studebaker how to select and buy the highest quality of leather.

You won't have to worry about making a grade with a Studebaker car, because the Studebaker motor has been perfected into the most powerful motor in the world in ratio to gasoline consumption.

You won't have to continually worry about lubrication, about oil and greasing parts of your car, because every part is equipped with ample capacity grease cups.

These are the things that make it a delight to own and run a Studebaker car, and cause you to say, "I never have had any trouble with it."
