Directors.

Subscribed and sworn to before me this 7th day of July, 1930.
J. L. Searcy,
Notary Public for Oregon
My commission expires April 28, 1934

**Candy Bill Exceeds
Cost Of Electricity**

Nation's Individual Expense for Sweets Exceeds Daily Cost of Current in American Homes

In an editorial, the Milton, Ore., Eagle says: "Last year, average expenditure for candy amounted to slightly more than 2 cents per day per person. During the same period the 84,000,000 people living in electrified homes spent \$604,000,000 for electricity, less than 2 cents per day each.

This is a graphic illustration of the fact that one of our most valuable commodities is likewise one of the cheapest. Electricity lights the home, operates the washing machine and refrigerator, heats the iron and does a multitude of other tasks, great and small, which are necessary to maintain modern standards of comfort and efficiency in the home. Yet at the end of the month, the bill for this service is an infinitesimal part of the family budget.

The electric industry has made every effort, not only to improve service, but to lower the cost to the consumer. Its record is one of increasing economy of operation. During 1919 the average steam generating station in this country required 3.2 pounds of coal to produce one kilowatt-hour of electrical energy. Due to the increased efficiency of plants during the past ten years a kilowatt-hour is now produced by the average steam plant with but 1.7 pounds of coal.

Such technical achievements as this may seem of little interest to the general public. Yet they benefit every American home and business by giving better and cheaper electric service.

**Front Page of Newspaper
Sent by Radio 3,000 Miles**

The complete front page of a newspaper has been transmitted across the country by radio for the first time.

Giving the present a peep into what may be commonplace in the future, engineers of the General Electric company recently reported that successful experimentation had permitted them to read the first page of the San Francisco Call Bulletin three hours after it had left the press. It was reproduced in full size in the laboratory by a new type automatic carbon recorder, connected to short wave receiving equipment actuated by signals originating 3,000 miles away.

The engineers did not hesitate to forecast many possibilities for this improvement in facsimile transmission, which, while still in a highly experimental stage, gave an indication that some day radio may be delivering a large part of business mail and may also bring daily newspapers directly into the home.

The recording machine was developed by Charles L. Young, son of Owen D. Young, chairman of the board of General Electric, who, in an address several years ago, said that he hoped to live to see the front page of the Times of London "flashed with a zip" into New York City.

The recorder can be attached to any radio receiver much the same as a loud speaker. It prints on a roll of paper which moves through the machine at about one half inch a minute. In this test short waves were used, so that there would be no interference with radio programs.

A roll of paper eight inches wide was used. The newspaper front page was recorded in three separate strips and then pasted together. Engineers said, however, that they did not believe they were limited to this width. The recorder is the second model made. The first took paper only five inches wide.

The sending equipment known as a facsimile transmitter and developed by Dr. E. F. W. Alexanderson, a pioneer in television and telephoto work, was located in the G. E. station W6XN, which operates on 17.3 meters at Oakland, California. A directional antenna pointing toward Schenectady increased signal strength 20 times over the ordinary type antenna.

The receiver was at the experimental station at Glenville, eight miles from Schenectady. From the receiving station, the facsimile signals were relayed by wire to Doctor Alexanderson's laboratory, where the page was recorded. During the transmission the experimenters kept in constant touch with Oakland by the code transmitter W2XO, 23 meters.

World-Beating Record

Every American should be impressed by the great world-beating fact that our country has maintained its basic industries, like railroads, mining, agriculture, public utilities and insurance on a foundation of private ownership and individualism and has not fallen for the delusions of socialism and communism.

European countries are dominated by government ownership and extensive socialization of great industries. They suffer from useless tax burdens resulting from tax free government owned enterprises. They have not adopted modern ideas of corporation management and citizen ownership. In Russia individualism has been completely crushed and property rights destroyed. Officialism reigns supreme and it was all done in the name of "liberty" and "freedom."

A remarkable example of progress in our own country has been the history of privately owned industries. They have shown a steady increase in service rendered and taxes paid coupled with declining comparative charges to consumers.

Belligerent Turkey
In Los Angeles, Calif., W. E. Proud-
waine, knife in hand, set out after a
large turkey. The bird, angered, kicked
the knife into Proudwaine's arm, se-
vering an artery. Then it leaped up-
on the bleeding man, and viciously
tore his shirt to tatters.

Reformers' Error
There are impatient men; too im-
patient to give heed to the admoni-
tion of St. Paul that we are not to
"do evil that good may come;" too
impatient to wait for the slow pro-
gress of moral causes in the im-
provement of mankind.—Daniel
Webster.

CLIMBING

to new heights of service

Onward and upward has been the march of electrical progress since that not-distant day when mother first gloried in her first electrical essential, the Electric Iron. Doubly wonderful it was that this necessity could be connected to the same wire that provided the most economical light ever known!

Today dozens of all-doing appliances are at the command of every housewife. Electric Radio makes the finest of world-wide entertainment available to every home. Every worker has a dozen electrical helpers to add to his productivity. And back of it all, every minute of every hour, day and night this organization with its service-maintaining representatives is "on the job" to make your job lighter.
