Father Hickey, of Wasco, arrived in the city last Sunday evening, says the Antelope Herald, intending to leave on Monday to fill appointments with his parishioners in the outlying districts; but owing to a recurrence of an eye trouble which has affected him seriously for some time, he was confined to his bed and was forced to cancel his engagements. It was his intention to hold a series of meetings at James Connolly's, on the John Day, at Axehandle school house, and at Kingsley, but unless his condition improves he will be obliged to return to Portland and consult his physician. The reverend gentleman has never entirely recovered from a severe attack of pneumonia and bronchitis which confined him in a hospital several weeks last winter, and in consequence of his enervated condition his eye trouble is easily aggravated, and compels him to remain in a darkened room often for days at a time.

Father Hickey's duties are numerous, the territory he covers in his parochial visits being extensive. Besides he is devoting much time and thought to the publication of periodical, the Occidental Magazine, and it is a source of anxiety to him that he may be forced, by the unfortunate circumstance of his illness, to postpone the appearance of his magazine, and also that he is unable to move his parishioners by appointments. It is hoped that his condition will speedily improve and that he may soon recover his health and strength.

Because John Hermann, a small boy in Lincoln, Neb., to get his mother's command to be sure and wash his feet before going to bed, several Lincoln men seem to owe him the chance to make a fortune. An antephlogistine factory is to be started in consequence, the antiseptic application to be manufactured from clay banks in the Southern portion of the city. The boy, who had gone barefooted for the first time this year, awoke the next morning to find that his clay-colored feet were blistered. Dr. Winnett, after examining the clay with which the youngster's feet were coated, declared that all that was needed to obtain a very good quality of antiphlogistine, or Denver mud, was the addition of glycerine and an antiseptic. The doctors and the owners of the land through which the clay banks run, at once made plans for a factory.—Chicago Record Herald.
