

Some Facts About Plan to Supply Medford Water

(Continued from Page One)

The formal contract is ready for signature, no official action is likely. So it seems to be up to Central Point.

In order to get the matter before the people of this city, a petition is being prepared which will be placed before all property owners, (who alone can vote on questions of bond issues) asking the city council to call an election at once to vote on the question of whether or not to proceed to make a contract with Medford for water and also to authorize the issuing of sufficient bonds to provide the necessary funds.

In order that the facts may be clear we wish to make the following statement concerning the value of securing such a water supply:

First as to cost. It is estimated by the Medford Water Commission, who are experienced in such matters, that the necessary mains can be laid for approximately \$22,000.

Second: Under the terms of the proposed contract, the city will receive a revenue of \$1.50 per month for each water user. There are at present about 230 water users in the city, which would be a monthly revenue of \$345.00. It is figured

that this amount, plus the saving of approximately \$100.00 per month now paid for electricity to run the city pump, would pay all costs of administration and retire the bonds necessary to install the system, without having to add one cent to the present tax levy. Thus the new system would be entirely self-supporting.

It is the general opinion among housewives questioned here that the extra cost per month would be largely saved each month in the saving of soap and washing powder on account of the softness of the Medford water, besides the saving in energy in removing the black ring on bath tubs, lavatories, etc. Clothing will wear at least a third longer if washed in soft water.

It is estimated the system will pay itself off in about 10 years, after which the added revenue from the system would enable the regular city tax levy to be reduced. In the meantime the city would have a water supply which would add much to real estate values and reduce fire hazards.

The argument has been made that Medford might grow to such an extent as to need more water herself and might then cut us off and leave us helpless. This argument seems a bit far-fetched. In the first place we would have at least a ten-year contract. In the second place, it's doubtful if it would be possible for Medford to do such a thing leg-

ally. And lastly, Medford is not going to cut off her nose to spite her face. There is water enough for all and we should get our share.

So think it over, folks, and be prepared to sign the petition when presented. "Procrastination is the thief of time," so let's go.—A.E.P.
