The Debunker

BY JOHN HARVEY FURBAY PH.D.

BIG EARS ON A MAN DO NOT INDICATE GENEROSITY

Men who make their living by "panhandling" on the streets have long held a theory which many others on the street also believe: namely, that people with big ears are likely to be generous, and that those with small ears are tight. Science has found that the size and shape of the ears have absolutely nothing to do with a person's disposition, his personality or mental traits. The panhandlers have passed up some good bets, it seems.
