Book Briefs

From Central Point Public Library
By Evelyn Graham

Central Point has received from the Jackson County Library a group of books to be permanently deposited in the local library. For the reference collection, we have been given "Collier's New World Atlas and Gazetteer" and the college edition of "Webster's New World Dictionary". This dictionary was chosen because it has the largest word stock of any college edition and its definitions are written afresh in a modern style and from an American point of view. In addition to the multi-colored maps and complete gazetteer, the atlas includes many

tables, charts, and statistics with an explanatory text presenting the world in its geographical, physical and commercial aspects.

We have received several of the Golden Nature Guide series, written by Herbert Zim. All of these books are beautifully illustrated with colored plates and are "co-authored" by eminent scientists. Available now at Central Point are following titles: "Trees", "Birds", "Flowers", "Stars", and "Insects". We also have on order the book on mammals in this series.

The nature lover will be glad to know that we have "Wild Flowers of the Pacific Coast" by Leslie L. Haskin. This attractive book includes botanical descriptions and illustrations of our beautiful western wildflowers.

Another welcome addition is Frederick Pough's "Field Guide

to Rocks and Minerals". The text is a technical discussion of mineral collections, rock and mineral classifications, physical properties, and descriptions. The 254 illustrations will be helpful to both the amateur and professional as an aid in rock and mineral identification.

It is the plan of the branch department of the Jackson County Library to continue to provide other new and interesting additions to the collection—to make the Central Point Library a more attractive and efficient servant of your community.
