The Development of our Mines, the Improvement of our harbors, and railroad communication with the Interior

Address to the Laborer, by Carl

The following language was addressed by Carl Schurz to the working men of California, in his late speech in San Francisco:

Above all things, I desire to warn you, as I have formerly warned workingmen in other places against the insidious pretence made by some that they can further the cause of labor by inciting the batred of the laborer against the capitalist, of the poor against the rich. To excite the hatred of the poor against the rich has in all ages and in all countries been the favorite resort of desperate demagoguery: but in a country like ours, where no barrier of privilege separates the different classes of society; where honest individual effort is hampered neither by legal obstacles nor by prejudice or custom; where every day we see millionaires as fathers of paupers, and merchant princes who were rocked in a poor man's cradle: where fortune and station, social and public, are equally open to the intelligence, viriue and energy of all; in this country such appeals should meet with contemptuous ridicule as well as abhorence. Such a cry is blasphemous calumny on our political institutions and our social order. Why, show to me, among the millionaires of San Francisco, one who years ago was not a poor man's son; show me the poor man here who may not himself, or may not hope for his son to be what many former millionaires have ceased to be. And are not open to the lowliest of your distinctions higher than those which mere wealth can conie? Within the memory of the youngest men before me you hvae seen a rail-splitter from Illinois and a tailor from Tennessee in the Pres'. dential chair of this great Republic : and to-day you see, as the candidate for the Presidency of the Republican party, James A. Garfield, who as a boy earned his bread as a laborer on the tow-path of a canal, and then, by his own exertion, gradually raised himself up to what he is now, one of the most distinguished men of the land, and the future President of the United States; a man who, in the fullness of his power, can and will tice the most active sympathy with like this, with its resources and opportunities, which the survival of the fit-Lifting out Samps with Dyna- test is the order of the day, where a measureless field or labor and enter-A writer in the "London Garden" prise never ceases to encourage every describes the process by which he honorable ambition-in such a counremoved stumps from a park in try we must hear appeals to the hawhich trees had been felled, and in tred of the poor against the rich! cleaning out old hedgerows, where Truly, the man who makes such apput in cara des varying from one such appeals are made to determine to two inches in diameter, and four the political action of the workinginches I no.
