BUTTER AND CHEESE

Both salt and climate are admirably adapted to the production of butter and cheese. On the bottom lands and re-

claimed marshes the grass grows through-

out the year.

The Coso Bay creamery situated at the mouth of Coso Bay, area last year 200,000 pounds, which brought the market.

If you wish to know what can be done in the line of cheese making, a table formulated by one of the

famous farmers in this county will show you what can be done in this line. The table gives the result from the milking of 20

cows — extra milkers and poor milkers.

MISCELLANEOUS

We have now entered the upper bay, and the emergent islands come down on both sides. To the south there is a high

range called the Blue ridge; this is clothed with a fine body of timber, and under which is an im-

mense body of coal, which drops out in all directions. To the north the debris of the mountains.

We have several extensive streams to ascend, and the northwestern corner of the bay, is Coso

Coast

THE COUNTRY AND ITS RESOURCES

In response to numerous requests for a description of the resources of the district, the writer has been

encouraged to publish a reliable description of the country. In the course of the discussion the writer will

establish a number of important points, which the reader will find interesting.

In the instance of our sea we will be able to examine the many resources, to obtain a clearer understanding of the

character of the country. The writer will conclude with a statement which the reader will find interesting.

The entrance to the harbor is situated in about 45

degrees of latitude and 117 west. By referring to a chart or map its position will be found on the westward side of the
cape Argo, on which there stands a prominent lighthouse.

The channel at the entrance has a depth of 30 feet at low tide, since the government improvement has
deepened the harbor. The entrance to the harbor has been gradually increasing, it is now over 30 feet at low tide. One of the

vessels which has been at anchor in the harbor is the "Argo," a schooner of 150 tons. The schooner has been in the harbor for

some time, and is now ready to proceed on its voyage.

Coso Bay is about 12 miles in length and 10 miles in breadth, and extends from one to two and

one-half miles. A sharp bend in the middle of the bay gives the impression of a longer bay. It has many tributary

streams, some of which are navigable from the bay proper, and the water is perfectly fresh and drinkable by steamer

for about 30 miles.

On entering the harbor and casting the wind to the right hand side of the entrance, the first view of the lower bay offers the

visitor a large view of the town. The town is a thriving place, and is the center of a large amount of

trade. The town is situated on the southern Oregon Coast, the cutting capacity of which is about 100 feet.

Proceeding, we turn to the right at North Bay, where a large range of low hills comes into view. The first object that

attracts the eye when approaching the bay is the town of North Bay. It is situated on the northern part of the

bay, and is a thriving place. The town is situated on the northern Oregon Coast, the cutting capacity of which is about 100 feet.

North Bend

Categorically, North Bend may not be classed in the list of towns. It is primarily

a residential place, and contains a fine body of timber, and

under which is an immense body of coal, which drops out in all directions. To the north the

debris of the mountains.

North Bend

This is a growing town. The population increases by leaps and bounds, and the

agricultural society signifies the construction of dwellings to accommodate the in-

habitants. Marshfield contains a bank, elementary school, postoffice, and store.

The manufacture of butter and cheese is increasing with giant strides.
