MAY 1 THE OREGON ELECTRIC.

Horace A. Brown. representing the New York Continental Filter Co., is in the city in charge of the installing of the machinery in the new filter of the Oregon Power Co., being pushed without ceasing.

Brown is an expert of the Company, sent all over the U. S. He jumped here from Ottumwa, Iowa, where he installed a big plant. He says there isn't a better one than the Albany plant anywhere. Everything in it is table best. Under it the process of filteration insures pure water, from 97 to 99.98 pure.

The system is simple. The water is pumped from the canal into the big settling tanks, holding 250.000 gallons, a solution of alum and perhaps soda added, practically killing the bateeria. The water then runs from the big tanks, three feet from the top into the filters, passing through sand. Albany the distance is 26 miles and from here to Eugene 45 The distance from Portland here is 76 miles and from here to Eugene by July work in preparation is being pushed all along the line. Passing tracks are deing built every four miles, 2000 feet long, with a view of eventually having a double track. There is no curve more than 3 per cent, and no grade more than 4 10th of one per cent. Similes, three less than the S. P., and to Eugene five less.

A splendid bridge will be built over the Santiam below Jefferson, steel and excrete, consisting of 175 foot truss pass, the alum absolutely eliminated, the water as clear as if fresh from a mountain top.

When completed it will be so our people can go through the plant and see for themselves how things are done.
