WEATHER CROP BULLETIN NO. 26.

Oregon State Weather Bureau tting with U. S. Signal Service Central of fice, Portland, Or , for the week ending Saturday, August 31st, 1889 :

The temperature has been below the normal. The nights were cool and in the heat of the day the thermometer ranged from 65 to 90 degress. The rainfall has been about normal. Showers of rain occurred in Western Oregon on the 26th 27th, 30th and 31st. In Eastern Oregon in a few places showers were experienced. The condition of the weather at present cems to presage an early commencement of the rainy sesson,

The sunshine has been about or below the normal. The rains have cleared the atmosphere of the smoke, in many parts of the State and to a great extent quenched the forest fires. The weather condition were favorable to the grass, late garden products and late potatoes.

Farmers in sections are beginning to work their summer fallow. The hop picking season has commenced, the rains will retard this operation. The general outlook is that there will be only about a two-third crop, but of good quality. At Eugene contracts for hops at 10 cents per pound are reported. The wheat output of the section east of the Cascasdes will be about 70 to 80 per cent of the average. It is reported that from Athena more wheat will be shipped than last year. Union county will have as much or more wheat than the average for shipment. The best wheat of Eastern Oregon comes from the section of the country adjacent to Athena and Milton and from the Grande Ronde Valley. Western Oregon has generally good wheat western Oregon has generally good wheat especially so on the "west side" of the Willameste River. The general average of wheat is poorer in quality than formerly, showing plainly the effects of the hot, dry weather. Eastern States average about 15 to 20 bushels of wheat per acre. Oregon, in the warmest and driest year on record vields on a average in western record yields on an average in western part of State from 25 to 30 bushels per acre. In the Eastern section from 18 to 23 bushels per acre.

The oat crop is not an average. Hay in

The oat crop is not an average. Hay in sections is plentiful; in others somewhat scarce. Grapes will be about or slightly below an average in yield, but they are very fine. The Delaware, Concord, Muscadine and Black Hamburg are the varieties that are of the most value in many sections of the State. The pear crop is good, same for peaches and plums; they are however, slightly smaller in size. The dry weather and Codlin moth injured the apple crop to some extent.

apple crop to some extent.

There is no change in the condition of the rivers reported. In sections of Eastern Oregon many of the springs and creeks are furnishing a goodly supply of water, in other sections they are absolutely dry.

INSURE AT ONCE,-Mr. Julius Gradwohl's advice to the people of Albany is to insure at once before it is teo late, for the fire field is devastating the cities of the N. W. Mr Gradwohl represents seven solid companies, with an aggregate capital of \$76,000,000 and a cash deposit of \$350,000 at Salem. As well as business men, farmers should insure their crops men, farmers should insure their crops, for they will burn, as a number of cases already testify Though Mr Gradwohl's companies lost some in Scattle, Vancouver, Ellensburgh and Spokane Falls their capital is so great the loss is not felt, and they will continue to place risks and pay losses with their usual promptness, the same as they did after the great Chicago fire, in which their losses were heavy.
