MARY PICKFORD HERE IN "THE FOUNDLING"

As "The Foundling," which comes to the Globe tonight, one of the most sweetly pathetic characters she has ever impersonated on the screen, the incomparable Mary Pickford surpasses herself! The foundling is the daughter of a struggling artist, at whose birth her mother dies. Because of his wonderful love for his wife, the artist hates the child that caused her death, and gives the baby girl to a mothering heart who cares for it. The tragedy of his wife's death brings to the artist the master-touch he has so long sought, and in the years that follow he wins fame and fortune; but in the sunset of life, he realizes its emptiness and futility, and yearns for the return of the child he had driven from his heart. She, in the meantime had drifted through a strange and varying life. How the threads of destiny unite these parted souls, bringing to each its first genuine happiness, is absorbingly unfolded in this unique photoplay.

TULLY MARSHALL AND FORD STERLING HEAD BILLS

Tully Marshall gives a very convincing and thrilling delineation of the wily, implacable Chinese half-breed, John Soy, in "The Sable Lorch." To be shown at the Rolfe tonight. This Fine Arts film play is adapted from the powerful novel by Horace Hazel-tine and represents the high degree of realism attained by the Triangle people in dealing with the life and ways of an alien race. Ford Sterling's comic facial expressions and bodily contortions will be seen at their best in the new Triangle play, "His Father's Footsteps." As a would be stern parent he is ludicrous enough, but Sterling is almost killing when he yields to the charm of his boy's sweetheart.

TIME TO CUT CLOVER.

In Order to Avoid Midge, It Should Be Cut This Week.

Linn county farmers should cut their red clover hay crop early in the week commencing June 5th, if they wish to avoid midge injury in the seed crop this summer. An examination of some thirty clover fields in different parts of the county made on June 3rd, shows that all are infested to a greater or less extent with the clover flower midge. These insects are present in the clover heads as larvae, about 5 per cent of which have commenced to turn pink, indicating that they are nearly full grown. Their presence in the clover fields is indicated by imperfect blossoming of the heads and they can be easily seen in

the florets by sectioning these imperfect heads with a sharp knife.

If the clover is not cut at an early date, these larvae will complete their growth, drop to the ground and change to flies, which will lay eggs in the seed crop. Early cutting of the hay crop destroys the larvae by drying up the clover heads and cutting off their food supply.
