"Electricity means a cool kitchen"

An electric range is the only real cool solution of the summer cookery problem.

G-E ELECTRIC RANGES

have such perfect heat insulation that the heat generated is concentrated on the food and not on the cook. The G-E range does perfect work because of the positive and exact control over temperatures which its construction gives to the operator. Furthermore, all vapors and natural juices are retained and cooked through the meat with their full flavor and nutritive value. For this reason, also, shrinkage of food is less.
