### ELECTRIC ARC MELTS STEEL

**Most Intense Heat Produced by Man  
Is From the Carbon Flame.**  
The most intense heat produced by  
man is that of the electric arc, and the  
possibilities of its application in var-  
ious branches of American industry  
have only begun to be realized. Like  
many other useful scientific agents, the  
electric arc has been adopted by the  
burglar. There is no safe known that  
will not yield to the electric carbon ap-  
plied by the skilled "safe cracker."  
Aside from lighting, the most useful  
purpose to which the electric arc has  
been put is in the mending of broken  
or cracked castings and metal parts of  
all kinds. A broken shaft, for instance,  
can be resurrected from the junk heap  
if a skilled workman, with adequate  
apparatus, is given a chance at it.  
Moreover, a broken metal piece repaired  
by the electric arc is as serviceable  
as when new. In fact, strain tests  
made upon repaired castings often re-  
sult in breakage at a different point  
than where the repair was made.  
Operators are well protected against  
danger. Due to the intense heat at  
the point at which the carbon pours its  
electrical fire upon the metal, the op-  
erators usually wear helmets or at  
least hold between their eyes and the  
arc a thick plate of cobalt glass. The  
amount of protection required depends  
upon the strength of the current fed to  
the arc.—Popular Science Monthly.

### EXHAUSTING A SUBJECT.

**A Satirical Hint to Both Young and  
Old Writers.**  
Writers should early learn not to try  
to exhaust a subject. If there is one  
thing above another thing that a sub-  
ject will not stand for it is to be ex-  
hausted. It is the one tireless thing ex-  
tant. In every other way subjects are  
amiable and tractable.  
If you go at a subject in the right  
spirit you can say nearly anything you  
wish about it, but immediately you try  
to get a rope around a subject's neck  
and chase it around a ring until it is  
absolutely used up the said subject  
takes on a dry, dogged, stubborn air  
and refuses to be interesting, and of  
course a writer who cannot keep his  
subject interesting is lost.  
Think of the most uninteresting  
books you ever read. They were writ-  
ten by men who quite evidently sat  
down with the mental resolution,  
"Now, I'll just clean up on this sub-  
ject once and for all, so that it will  
henceforth be clear to all posterity,  
even unto the day of judgment." But  
of course no such aim was ever real-  
ized.  
The only sure result of trying to ex-  
haust a subject is to prove that it is  
exhaustless.—Life
