EASTERN OREGON MINES.

Some of the Rich Properties Directly Tributary to Sumpter.

Some months since the Oregonian published a list of mines in Eastern Oregon which were then being worked, together with the number of men employed on each property and the name of the manage-
er that was carefully compiled by F. R. Melius, of Baker City, and like the loyal citizen of that city which he is, his work was generally published. The list was now revised by the Oregonian and the following is the revised list of properties, with the names of the mines, the number of men employed, the location, whether the mines are still in operation, and the name of the manager, if there be one: The geographical location and the topography of the surrounding country are given. These mines, 52 quartz and 27 placer, employed 529 men, $6,075,000, and 513 on the placer ground.

Now, as a matter of fact, these 160 mines, 56 are directly tributary to Sumpter, at whose place all supplies are purchased, and to which point all machinery is shipped by rail for transportation by wagons over the mountain roads. The geographical location and the topography of the surrounding country assist this work better, which is necessary. These 56 mines, 29 quartz and 27 placer, then employed 457 men, $6,000,000, and 215 by the latter.

The names of these mines are:

QUARTZ.
