ened parts, giving almost immediate benefits. You wear it all night for two or three months. That is what brings vigor to the weakened parts. I treat with this appliance all forms of Rheumatism, Nervous Debility, Kidney Disorders, Lamé Back, etc., in either sex, and can cure after other treatments fail. But, as every one knows, the Dr. Sanden Electric Belt is really a specific remedy for those peculiar weaknesses of men which results from youthful indiscretions or excesses. I treat more

WEAK MEN

than any other specialist in America. My Belt generates a pleasant, soothing current of galvanic electricity in precisely the right quantities. Worn at night you receive the full benefit during the entire time you are asleep. My belt has been brought down to date with improvements as late as August 15th last, while the new scientific suspensory applies the current directly over the spermatic chord and prostate gland. Over 6000 people will give willing testimony to the merits of this appliance during 1899.

BEWARE OF IMITATIONS!—I am forced to complain to my patrons of the many worthless imitations of the Dr. Sanden Electric Belt which are constantly cropping up. There is but ONE Sanden Belt, and that can be had at my office only. There is no new application of electricity other than the one used by me. I will give \$1000 for the production of any belt superior to mine.

Don't be deceived by the foolish claims of unscrupulous people. Established in 1872, we are the oldest and largest producers of electro-therapeutic appliances in the world. There is no unpleasant burning or blistering produced by the Dr. Sanden Electric Belt. Electrodes covered with soft antiseptic material.

MARBLE AND LIME.

One of Baker County's Industries Worked on a Large Scale.

The magnitude of the enterprise known as the Oregon Marble & Lime Works, which is located almost at the threshold of the city of Huntington, but five miles distant at a camp called Lime, is greater than is generally known. There is a postoffice, telephone line and two works located there. The Oregon Marble & Lime works have a three-story building containing all modern machinery adapted to use in the reduction of the rock.

It has a new aerial tramway from the works to the mountain from which the company gets its product. The entire mountain is of the highest quality of lime and cement rock, and furnishes an inexhaustible supply. The tramway forms a circuit of one-half mile double or one-quarter mile long. The company works night and day shifts and is running at full capacity, having orders for more than they are able to supply. They ship over 20 cars each week. They turn out the very best quality of lime and make ten different kinds of cement, while their plaster is acknowledged by all who have tested it to be unexcelled. Fifty thousand barrels yearly is what their capacity represents, and they have always produced this amount for four years.

The Oregon Plaster Milling company is the name of the other works, and the mill adjoins the other works and is owned by the same company. This mill has a capacity of 50 tons per day of plaster and cement. The two works are under the supervision of Joseph Tomlinson, who is a thorough master of the business and to whom much of the credit for the success of the venture is due.

The company has gypsum mines five miles distant from the works, and there is a whole mountain of this substance, which is a valuable item to them.

This enterprise is quite important to Huntington and Baker county, inasmuch as it represents a nice little payroll, and everything connected with the handling of its product is manufactured right at the mills—even the casks for shipping are made here. The writer accepted the courtesy of a ride to the works with P. H. Flynn one day this week and we made a personal inspection of the entire works, and we must express our surprise at the vast amount of business which is going on so near our little city without previous mention. It is the greatest enterprise of its kind in the Northwest.—Huntington News.

Needed Amendments to Mining Laws.

An amendment to the mining laws providing that claims could not be re-located without the usual ten feet of work would be very beneficial, said a prominent Baker miner on the streets this morning. Our laws are also bad in regard to working and doing location work. At present the wording must be done in 30 days and 90 days are allowed in which to do the work. This should be revised and only 30 days allowed to do the work and about 60 to record, for in many instances it is not known whether a claim is worth recording or not till after some little work is done.—Republican.

Bait Used by a Book Agent.

He was a book agent—not the old type pictured by the alleged humorists of the press as a persistent bore, but the up-to-date fisherman. He stepped into THE MINER office, and cast this kind of a fly at the writer: "I have been requested to call on you and have a talk relative to (here naming the book). I am merely making a preliminary canvass and wish to put this work in the hands of prominent, influential men, to whom we will be permitted to refer. I am going to give this valuable work to you on exactly the same terms that I sold it to the Orego-

nian." This last proposition was repeated several times, the angler plainly thinking that the kind of bait necessary to catch a country newspaper sucker. This speech was evidently fixed up for the machine who sprung it, and it apparently wins out in the majority of cases.
