The Highest Scientific Development in Electrical  
Home Treatment is Found in the

## Dr. Sanden Electric Belt

### 1900 Model

I OFFER in my 1900 model new broad cell Electric Belt the highest development in body battery treatment that science, mechanical genius and my 30 years' experience can suggest. It is on a plane all by itself. The United States Patent Laws protect me in my various inventions. From the time the raw material is received at my factory until the completed belt is turned out and tested on a sensitive galvanometer, each stage of development is under the careful supervision of a man skilled in detecting mechanical imperfections, so that when finally the belt is ready to deliver to my patient, I offer it with a guarantee of perfection in

every point, that the current will last one full year, that the voltage is not too great for the amperage, the intensity less than the volume, and, in fact, that it is perfect in every detail. The Dr. Sanden Electric Belt, in its various stages of development, during the past 30 years, has always been ahead of all others, just as it is today. And, remember, in buying an Electric Belt you will need advice, good common sense, exclusive advice, and possibly lots of it. Have you thought of that? Therefore, do you not think my 30 years' uninterrupted experience gives me something of value to offer you.

When a Dr. Sanden Belt is purchased, my advice is included free until a cure is effected. The Dr. Sanden Electric Belt is particularly recommended for weaknesses of men which result from excesses, and it has a special attachment to meet that condition. However, it is used with other attachments, by women as well as men, for Rheumatism, Lamé Back, Nervousness, etc. The new antiseptic disc covers of my invention—imitated of course—can be used on the Sanden Belt only, and absolutely prevents any burning by the current.

Drop in at my office for free consultation, or write for free book, sent sealed by mail.

Dept. 19, Russell Bldg.

DR. A. T. SANDEN, Portland, Oregon

#### SUMPTER'S NEW RATING.

Advanced to a Third Class Office by the Postoffice Department.

Reference to the receipts of the post office is considered the most reliable manner of ascertaining a city's standing. During the fiscal year ending June 30, there were 47 cities that made sufficient gains in the revenues of the local post-offices to entitle them to be advanced from fourth class to third class. Of all this number Sumpter made the greatest gain, which is certainly cause for congratulation. Postoffices where the receipts fall below \$1000 a year are rated as fourth class, and from \$1000 to \$8000 per year as third class. If the percentage of increase reached last year is maintained until July 1901, Sumpter will be entitled to the rating of second class. Owing to the large number of offices for which this is a separating and distributing point, an extra clerk is allowed. As at present managed the Sumpter office is a model one. There is an ample supply of boxes and the mail is handled accurately and speedily, for which Postmaster Jewett and his able assistants are entitled to the thanks of the community.

#### Operations at the Copperopolis.

The Copperopolis, situated on the east side of Cougar ridge, half a mile north-east of the Sherbondy, from present indications is going to be one of the big mines of the Quartzburg section. A. W. Dunn, the owner, has run a 75-foot tunnel besides running an open cut for 100 feet across the ledge on which one wall has already been struck. Mr. Dunn is making extensive and substantial improvements on this property. His boarding house, bunk house, blacksmith shop and other buildings are all first-class. He has already put in shape a mile and a half of first-class road leading from the

road on the east fork of Dixie creek to the mine. A force of men are now at work breaking ground for a 1200-foot tunnel, and inside of a month the largest crew will be at work on the Copperopolis of any other mine in this section. The Copperopolis has been listed with the Portland Stock exchange. The ore from this mine is low grade, running from five to fifteen per cent copper, besides gold and silver, but there is no limit to the quantity.—Prairie City Miner.

#### New Building Completed.

The Sumpter Transportation company have about completed their new barn opposite the stage office, and have one of the best appointed places of the kind in Oregon. Large and roomy single and double stalls to accommodate 100 head of stock, each of which is lighted by glass windows at their head, which, when opened, gives good ventilation. Convenient harness rooms and office in the front and center of the building, feed and grain rooms, arrangement for buggy washers, with water hydrants, electric lights, etc., makes a place of habitation for men and horses employed by the company, a palace of comfort compared to what they have had to deal with in the past. With Superintendent George Gilson in charge of this department of the company, the public is assured of a splendid and prompt service, as no better man with a knowledge of his duties could be found.

#### Another Strike

Mr. George Loutz, who has been developing a prospect some four miles from Sumpter, opposite the Umpqua group, has uncovered what promises to be an important lead. The ground had been run over and pronounced valueless, but Mr. Loutz, although possessing little knowledge of mining, had no trouble finding a ledge carrying good values and being in place.

#### BIGGEST MINE ON EARTH.

That is What the Oregon Wonder is—or Nothing.

P. F. Morey has been sick for several days and is rusticated at the springs and when met there the first of the week by a Miner man and asked the latest regarding the Oregon Wonder, said:

"We have let a contract for a 300-foot tunnel to a gentleman from Colorado by the name of Forrister, for six dollars per foot. The contract work will be done on the west end of the claims, near Indian creek. I am going to Portland soon and bring back with me a one-stamp mill, and instead of assaying make mill tests of the ore.

"I don't want people to think that this is any boom affair, for it is not. It is simply a straight business proposition, and should the Oregon Wonder turn out all right it will be the biggest mine on earth and should it not, we are only a few thousand dollars looser."

At present the Oregon Wonder crew are camped a half a mile west of the springs instead of at the other end of the claims on Indian creek.

Mr. Forrister is a Colorado mining man, and like all other mining men from that state, knows his business. As soon as the buildings can be put up and the necessary equipments secured, work will be commenced.—Prairie City Miner.

#### More Machinery.

Machinery for the Red Boy mine continues to arrive in carload lots faster than it can be hauled to the mine. Another boiler, several condensers, stand pipe for the shaft, rods, etc., make up the list.

The hoist will be among the last of the order to arrive. The machinery and equipment represents an expenditure of over \$100,000, and will be sufficient to

place the Red Boy well in the lead for equipment.

The transportation of the immense boilers, weighing 20,800 pounds, to the mine is proving the hardest task the local teamsters have had to deal with. The first boiler is out some three miles from the city awaiting the arrival of a wagon strong enough to carry it over the rough mountain road. The first wagon tried was too light and had to be abandoned.

#### Those New Bricks.

The rubbish is being cleared from the lots on northeast corner of Granite and Center streets preparatory to the work of erecting the two large brick business buildings. Most of the brick, sand and other material is on the ground, and active building will be commenced in a few days. One of the business houses will be occupied by the Hobson Mercantile company, the other is not rented definitely, but there will be no trouble to find a tenant for such a desirable location.

LOST.—Between Granite and Sumpter Sunday, five samples of ore tied in one sack, and sampler's pick. Parties finding same will bestow a favor by sending to MINER office.

Go or send to the City Green house, Baker City, for choice carnations; thirty-five cents per dozen. Roses fifty cents per dozen.

Only the best of Wines, Liquors, Ice Cold Beer and temperance drinks at Barnard's Halfway House.

Handsome lot of Dicken's vest chains for men at F. C. Brodie's jewelry store, Opera House block.

The City Green house, at Baker City, furnishes choice cut flowers.

Five quart bottles of Olympia beer for \$1.00 at Henry Fingers'.
