

OFFICERS	Grizzly Gold	Capital \$500,000
JOHN J. PENHALE, - President (Gen. Mgr. Bunker Hill Gold Mng. Co.) SUMPTER, OREGON	Mining Company	In 1,000,000 shares of the par value of Fifty Cents Each. Treasury Stock 400,000 shares.
ALBERT GEISER, - Vice-President (President Citizens Bank) BAKER CITY		FULL PAID AND NON-AS- SESSABLE
EUGENE SPERRY, - Treasurer		
R. C. PENTLAND, - Secretary		
PROPERTY		
<p>THE Grizzly group consists of the "Colorado" and the "Colorado Extension" quartz mineral claims, situated in the Sumpter District of Baker county, Oregon, six miles northwest of the town of Sumpter, forming part of the rich mineral zone wherein are located producing mines of fabulous wealth, such as the "North Pole," "Columbia," "Golconda," "Bonanza" etc., etc. Development work on the Grizzly group has disclosed a gold bearing ledge of remarkably high value, a force of men are now at work and there is every reason to expect the property will become one of the greatest mines in Oregon.</p> <p style="text-align: center;">Read Our Proposition Carefully</p> <p>A limited amount of Treasury Stock is offered for sale at SIX CENTS PER SHARE, payable cash down or in twelve monthly payments, the funds realized being used for opening up the property and making a producing mine of it. The purpose of the company is to have a steady inflow of cash to meet monthly pay roll. This can be realized by selling stock on monthly installments just as well as if selling for all cash, and at the same time enabling investors to secure control of a larger block of stock than if paying all cash.</p> <div style="border: 1px solid black; padding: 5px; text-align: center;"> <p>Two Thousand Shares at \$120.00, payable \$10 down and \$10 per month until paid. Larger blocks of stock on pro rata scale.</p> </div> <p style="text-align: center;">For Prospectus and Further Information, address,</p> <p style="text-align: center;">Grizzly Gold Mining Co., Sumpter, Ore.</p> <p><small>REFERENCES: FIRST BANK OF SUMPTER SUMPTER, ORE. THE REPUBLIC MILL.**New Method By Which the Ore is to Be Treated.**

Following is the new method by which the ore of the Republic mine will be treated: The ore will be taken from the mine to the sampler, where it will be reduced to about one-fourth of an inch in size. It will then be sent to the main mill by an elevator. It will there pass through a series of rolls to reduce it to about 30 mesh. All that passes through the screen of that mesh goes to the raw ore bin and the residue is carried to barrel rollers, where it is reduced with iron balls to the requisite size, and this too, is conveyed to the bin for raw ore. From the receiving bin it is fed by automatic feeders, to a traveling carrier and passes over a flame of such heat as to thoroughly roast the ore. These travelers are about 100 feet long and travel very slowly, giving the fire time to act upon the ores. On its return to the starting point it is dumped into a bin and from there elevated to a large bin on the floor above, into which all finished ore passes.

The ore is now conveyed to the vats, where chemical treatment begins. After remaining in the vats for a specified time the liquor is drained off and elevated into other tanks, where it is treated to a bath with zinc dust. This is acted on by the cyanide liquid similar to its action upon zinc shavings. At the proper time this liquid is drawn off and returned to the mixing tanks, where it is renewed by the addition of more chemicals and is again ready for use. The residue in the tank, which is but a black mass of powder, is taken to the smelting room, melted and run into bars, ready for shipment.—Spokesman-Review.

Allen Bros. Win Don Juan Suit.

Allen Bros. against locators of the Don Juan mine brought an injunction against

Le Claire and others to restrain them from moving the mill of the Don Juan mine. Judge Robert Eakin, of the Circuit Court has rendered a decision in favor of Allen Bros. The mill was being torn down and moved to the Winchester mine, joining the Bonanza.

Gold Production.

The phenomenal commercial record of the year ending June 30, as shown in the annual report of the chief of the treasury bureau of statistics just issued, has been accompanied by an equally striking record with regard to gold production, says an exchange. The gold mined in the United States during the year ending December 31, 1899, exceeds that of any year in our history, and for the first time surpasses the record established in 1853, when the mines of California made their highest record of \$65,000,000. The gold production of the United States was in 1899, according to the estimate of the director of the mint, \$75,500,000, while no prior year had shown so high a total as that of 1853, \$65,000,000, though the total for 1898 was \$64,463,000. The very rapid increase, both in the United States and elsewhere, during the past few years brings the gold product of the half century now ending to the enormous total of \$6,665,631,000, or more than twice as much as during the 350 years preceding that period. The gold production of the world from 1492 to 1850 amounted to \$3,120,780,000, while that of the period 1851-1899 was \$6,665,631,000. The rapid increase in production in this country and the large excess of exports over imports have been accompanied by a corresponding increase in money in circulation in the United States, which, on July 1, 1900, stood at \$26.50 per capita as compared with \$25.38 in July, 1899, and \$24.74 the year preceding, and in 1896 at \$21.15.

Five quart bottles of Olympia beer for \$1.00 at Henry Finger's.

IMPORTANT GOLD STRIKE.**Ledge Averages \$14 on the Surface in the Baisley-Elkhorn District.**

What is believed to be one of the best gold strikes ever made in the Baisley-Elkhorn district, which lies about 16 miles to the northwest of Baker City, was discovered a day or two ago by Jeff Boyle and his chum, Howard.

The strike was reported here yesterday by Mr. Boyle. It was made on the head of Salmon creek, between the Baisley-Elkhorn and Pocahontas Belle mines. For many years prospectors have been looking for the mother lode in the hills which has supplied the rich placer grounds of Salmon creek, and while many have claimed to have found it, it is believed that Boyle is the lucky man. He has found not a mere stringer of rich ore, but a strong and well-defined ledge which goes \$14 to the ton on the surface and below runs into sulphides, indicating a probability of a permanent and continuous vein of ore.

Mr. Boyle is a conservative man and would not talk much about his find, but told a personal friend that they proposed to continue development work and would soon ascertain the extent of their riches.

Letson Balliet, a California mining man, has bonded the Gold Ridge mine on lower Burnt for \$60,000 and has commenced development work on a large scale. A number of other large deals are booked for this fall, but the particulars cannot yet be given to the public. Those in touch with the situation predict the liveliest business ever known in this camp during the coming fall and winter.—Democrat.

Aluminum Curtains.

Aluminum has just been employed for the construction of a new fireproof curtain to be used in theaters. The curtain is 60 feet wide by 54 feet high, is composed of aluminum sheets one twelfth of an inch thick and weighs 4000 pounds.
