

CONSERVATIVE MINING INVESTMENT!

LIBERTY BELL CONSOLIDATED MINES COMPANY own four quartz claims in the Alamo division of the famous Red Boy district, one half mile from the town of Alamo, in Grant County, Oregon.

In the very heart of possibly the **Greatest Mineral Zone** in all the world, surrounded by such well-known operating properties as the Bonanza, Strassburg, Red Boy, Inter Mountain, Cougar, Concord, Alamo and Quebec. The claims are well timbered and watered. Geological formation—argillite and porphyry. Character of ore—simple silicious quartz, sixty per cent free milling, the remaining values concentrating 50 in one.

Three distinct well defined veins can be traced for a distance of 1000 feet on the surface, averaging from 14 to 30 feet between walls, giving \$7.20 per ton on surface.

Numerous open cuts, adits, tunnels and cross country trenches thoroughly prospect the width and value of the ledges.

Pan samples taken from various test pits on the surface, never fail to yield a fine prospect in free gold, the assay value giving as high as **\$216 per ton in gold.**

The Strassburg group, which adjoins the

LIBERTY BELL on the north and east, in driving a cross cut to tap their main lead at a depth of 500 feet, have cut two blind ledges 14 and 19 feet in width only 150 feet from our side line, coursing southwest through three of the LIBERTY BELL claims.

Capitalization, 1,000,000 shares, par value \$1 each, **fully paid and non-assessable, 400,000 shares in the treasury.** The first issue of 100,000 shares is offered at 25 cents per share. **Price of second issue will be advanced to FIFTY CENTS.**

The proceeds from the sale of 200,000 shares properly expended in developing the mines and purchasing milling plant, will enable the LIBERTY BELL to pay **\$30,000 monthly.**

All checks and drafts should be made payable to R. H. MILLER, Treasurer, who is Cashier of the First Bank of Sumpter.

ANOTHER SEATTLE COMPANY.

Will Sink 200 Feet and Drive a Tunnel on the Justice.

The officers of the Justice Gold Mining company, whose property is in the now famous Sumpter district in eastern Oregon, have recently issued their prospectus. The Sumpter district is placed among the best known mining localities of the Northwest, and is attracting the attention of capitalists as is no other quartz mining region in the world. As yet it is less than a half dozen years old, but has already a large number of dividend paying properties and the two claims that belong to the Justice company are located in the midst of the dividend paying mines. The universal opinion of geologists and mining experts is that no unexplored region has as many attractions or offers as many promises that will be fulfilled by actual prospecting as the region about Sumpter, Oregon.

Two weeks ago the Justice company sent an experienced prospector to Sumpter for the purpose of making other locations and to prepare for summer's work on the Justice. A letter received from him yesterday advises the company that from surface indications the Justice will be the "prince of eastern Oregon." An average specimen of ore taken from the exposed portion of the ledge gave an assay of \$17.30, and it is well known to all who have worked in the Sumpter mines that the richness of a ledge increases with depth. The ledge of free milling ore in the Justice properties averages a width of twelve feet and traverses the property 3000 feet, so that in advance of any development work being done the owners are naturally jubilant over their prospective riches. It is their purpose to push the work as soon as the snow is out of the trails so that supplies can be hauled to the camp.

In the organization of the company

300,000 shares of stock were set aside for development purposes, but only a limited number will be sold at the outset—sufficient to meet the expenses of development after the first season. With the proximity of the mine to rail transportation the cost of marketing the ore is reduced to a minimum. It is calculated that \$3 surface ore in that locality can be mined at a profit and when the Justice owners find that their surface croppings assay \$17.30 per ton, they inherently feel that their troubles in financing their proposition need not cause any great loss of sleep.

The plan of the work outlined for the summer is to sink a shaft to a depth of 200 feet, then drive a short tunnel to intercept the shaft, thereby gaining an outlet for the ore through the tunnel instead of hoisting to the surface through the shaft. The tunnel will also drain the mine of any water that may be encountered.—Seattle Times.

MAP GIVEN AWAY.

How to Get a Large One of the United States, for the Wa.

If you are going east, or thinking of sending for your family, do not buy your tickets until you have secured rates from the Illinois Central Railroad company. Their service is excelled by none, and they can reach all points in the east, south and southeast from any point in Oregon, Washington or Idaho. Through tourist car from Pacific Coast to New York.

If you will send fifteen cents in stamps to the address given below, we will forward you by return mail a large wall map of the United States, Cuba and Porto Rico, 34x40 inches.

For particulars regarding passenger or freight rates, call on or address,
