Become interested in a proven mining district. Sumpter's dividend paying mines are proof. Some have 1,000 feet depth, others are sinking 2,000 feet. The Bonanza paid \$102,000 in dividends for the month of March, 1901. The Sunrise mine is the direct south extension of the rich Inter Mountain mine. This company has absolute title to its mines; each share gives you an interest; each share will increase in value as the mine develops without additional cost to the holder. One thousand shares will make you money. One hundred thousand shares will make you a large sum of money.

GEOLOGICAL SURVEY.

Report Says the Best Mines are in the Sumpter District.

A press dispatch from Washington, D. C., of recent date, says that a portion of the next annual report of the geological survey will be devoted to the gold and copper fields of eastern Oregon, in the Baker City, Sumpter and surrounding regions. This particular feature is to be prepared by Professor Lingren, who spent last summer in this section, making a thorough reconnaissance, with a view to compiling an elaborate and complete report.

The area covered by Professor Lingren extends from Canyon City on the west, through Sumpter and Baker City on to the Snake river and Cornucopia mountains and cover an area approximately 100 miles long by 50 miles wide. It was originally intended to compile this information into one of the regular folios of the survey, but it was found that this would not begin to cover the area investigated, and the original plan has been changed.

Professor Lingren expresses surprise at the extent of the mineral deposits in that region, saying there is much more and richer ore than he had supposed. But further than this, he thinks the area as a whole is yet in an early stage of development, and that untold wealth lies undiscovered in the Blue mountain region. From his hasty examination, he believes the deposits of the greatest extent, those of "greatest permanence," as it is commonly expressed, lie in the vicinity of Sumpter, although richer deposits have been found in other localities. There the ore seems to be thicker than in any other

locality he visited, and when other vicinities have been worked out, it is his belief that Sumpter will continue to produce in large quantities.

A considerable interest was manifested in the copper deposits over on the Snake river, near the Cornucopia mountains. Professor Lingren is of the opinion that great wealth is to be found in that vicinity, far beyond the expectations of those who are now developing that region. What silver exists in eastern Oregon, he believes is not in paying quantities, the gold and copper being the only metals worth prospecting for.

This forthcoming report of Professor Lingren will be of great assistance to those who are developing eastern Oregon. While his examinations were made hastily, he worked to best advantage, having the hearty co-operation of the prominent mineowners, and with the eye of an experienced scientist, which facts all combine to make his report one of great value.
