Become interested in a proven mining district. Sumpter's dividend paying mines are proof. Some have 1,000 feet depth, others are sinking 2,000 feet. ♣ The Bonanza paid \$102,000 in dividends for the month of March, 1901. The Sunrise mine is the direct south extension of the rich Inter Mountain mine. This company has absolute title to its mines; each share gives you an interest; each share will increase in value as the mine develops without additional cost to the holder. ♣ One thousand shares will make you money. One hundred thousand shares will make you a large sum of money. ♣ ♣ ♣ ♣ ♣ ♣

Tom Paine Will Resume Operations.

The information is given out by E. H. Hackett, managing owner of the celebrated Old Tom Paine mine in the Pocahontas district, that operation of that property will commence at once. A force of miners is being secured in this city by a local employment agency, and the men will be sent out as soon as the force is secured. The Pocahontas district is one of the oldest camps in eastern Oregon. It is located seven miles west of Baker City, on the northeast slope of the Elkhorn range. The famous Nelson and Carpenter placers are situated at the foot of this range, and are presumed to have their source of placer gold supply in the rich free gold ledges higher up in the hills, where lies the Tom Paine. This is by far the best developed mine in the district. It has both a true fissure vein and a contact. About 1200 feet of tunnels, shafts and crosscuts, attaining a maximum depth of 300 feet, have exploited a five-foot ledge carrying remarkably high values in free gold. The Tom Paine is an old producer, and will be placed in that class again before snow flies.—Baker City Herald.

Coal and Oil in John Day Valley.

E. E. Cleaver tells the Democrat that Cayon City people have organized a company to mine coal on a ranch about a mile from John Day City, where a four foot vein of good bituminous coal has been found, and alongside of the coal vein is 16 inches of pipe clay, which will also find a market. It is the intention of the company to sink on the vein and drift sufficiently to determine whether the coal is there in enough quantities to pay or not. The formation of the land is sandstone and shale. All the mines in that district made wonderful development during the winter—more work was done than ever before in the history of that section all told. The principal work was done in the vicinity of Prairie City. California peo-

ple are there prospecting for oil, of which there are good indications. The George Washington mine, owned by Ward Brothers & Sexton, has developed very peculiarly, and upset the theories of all miners. It has a north and south ledge of free gold, very rich, which is crosscut beneath by an east and west ledge of rich base ore.

Mining Interests at North Powder.

The country in the vicinity of the little city of North Powder, Union county, south of this city, is being developed into a mining section that gives promise of being one of the richest camps in eastern Oregon. In all directions from the town mineral has been discovered on the surface and where development work has been done, in many instances ledges have been discovered composed of quartz with deposits of gold, silver and copper. The Buckeye group is probably the best developed mine in that camp. A shaft 125 feet deep has been sunk and much drifting done and the result is very satisfactory. A large ledge of ore has been opened and it is only a question of a short time when reduction works will be erected there. This week a rich strike was reported in what is known as the Texas, Iowa & Oregon mines, owned by B. F. Colley and G. L. Howland, a 24 foot ledge of rich ore being uncovered. Other ledges are being worked and it is predicted that the greatest activity will prevail in the vicinity of the city of North Powder this year.—Union Republican.

The Capital hotel, under the management of Mrs. Tedrowe, serves special Sunday dinners. Families should take advantage of this. Best table board in town. Try it.

Strout, assayer, 361 Bennett Ave., Cripple Creek, established in Colorado in 1876, gold (crucible assay), 50c; gold and silver, 75c; gold, silver, copper, \$1.50; forty years practice.
