

**BUY SHARES
IN A DIVIDEND PAYING
MINE**

**LOCATED AT
PEARL, WILLOW CREEK
BOISE CO., IDAHO**

THE FRIDAY MINE

WAS A REGULAR DIVIDEND PAYER for several years, and in the days of its early history the FRIDAY was a sensational producer of high grade shipping ores, and carload after carload were regularly shipped to the smelters, both at Salt Lake, Utah, and at Denver, Colorado. The high grade ores were hauled in the crude state by teams twenty-six miles to Boise City, Idaho, the nearest station at that time, and all the lower grade ores were left on the dump or in the mine.

In 1898 arrangements were being made for the erection of a large concentrating and milling plant, in order to mill and concentrate the ores running less than \$25 per ton, which would not pay for hauling the long distance to the railroad; but owing to a disagreement among its owners, the mine was closed down and thrown into litigation, which lasted nearly three years.

LITIGATION NOW SETTLED

The litigation has only recently been settled by purchasing the different contending parties' interests, and the FRIDAY MINE has been turned over to the **FRIDAY GOLD MINING COMPANY**, a corporation organized under the laws of the state of Oregon, with a capital stock of one million shares of the par value of one dollar each, fully paid and non-assessable, 250,000 shares of which have been set aside as treasury stock, and a portion of this stock is now being sold for the purpose of raising funds for a

STAMP MILL

and Concentrating Plant, to be erected at once, and as soon as the mill is completed the stockholders are positively assured of a **REGULAR MONTHLY DIVIDEND**, even much larger than when the Friday Mine was shipping ore prior to the litigation, because at that time no ore could be handled at a profit which did not run more than \$25 per ton. With a mill and concentrating plant, all the ore between the walls, in the vein, can be handled at a profit.

THE DEVELOPMENT WORK

consists of a shaft 130 feet deep; drifts on the vein were run both ways for a distance of 280 feet in length, showing a body of ore from 2 to 6 feet in width, and assaying from \$10 to \$500 per ton. There is now 4500 tons of this ore in sight in the mine and ready to be extracted, having a value of at least \$90,000. The vein has been explored on the surface for a distance of over 1,000 feet, showing high grade ore the whole distance. Consequently, by continuing the drifts at the 130-foot level we are absolutely certain of a continuation of this ore body.

REASONS WHY YOU SHOULD INVEST IN THE FRIDAY MINE

- 1 It is a developed MINE, not a prospect.
- 2 Until closed down by unfortunate litigation, which is now completely settled, it was a constant dividend payer.
- 3 Large ore bodies, which will net to the company \$50,000 for the first six months, are now blocked out, ready for the mill, and this means an annual income of 80 per cent on the actual investment.
- 4 As soon as the mill is completed you will draw out your regular monthly dividends.
- 5 It is safe, certain and conservative.
- 6 We are not soliciting your money for the purpose of developing the mine, but only for the purpose of erecting a mill to work the reserve ore bodies in the mine.

There is no safer investment than in a fully developed mine of known merit, but remember there is a vast difference between a fully developed mine and a prospect. When you invest in **FRIDAY STOCK** you are investing in a fully developed mine of known merit, and your investment is certainly **HIGH CLASS**.

We are now offering a limited amount of stock at

FIFTEEN CENTS PER SHARE

NEIL J. SORENSSEN & COMPANY

FINANCIAL AGENTS

SUMPTER,
