WORK AT THE
CALIFORNIA

Oregon Record Smashed in Opening Up This Mine.

Thee California mine, owned by the Turnagain Armi Gold Mining company, of Minneapolis, is the mene of much nctivlty at thin time. The nawmill is now at work entting laminer for the concentrating plant, the building for which is being erectesl as rapidly an the limited fores of cariwenters can puinh the work. It tian been impussible to necure all the carpenters that could toe employent to advantities, owing to the large amount of building now being dowe in Numpter and thronghont the district.
The maw mill has a cupacity of thirty to forty thomanal feet a day, driven by the 7 bhorme power ungine, and in now cutting up loges much faster than the lumber is meeded. The saw itself is a Sbibincher. It will be uneed permanently for getting ont timbers for the mine after the tmiddings are all completed.
As atatesd a week or two ago, the mot ive power has all been moved from the old tunnel house to the mill site, where the concentrator is being erected. There are two torilers of tho-horse power each, one engine 75 and one of $\mathbf{2 0}$-horse power. The former in now being unel to, drive the wawmill and its installation is only temporary. It will furnish motive nower for the rollers and air compremor anid the maaller one for the vannera. They will be in one rooth and can le operatesi by one mann, a saving of wagen and fuel and otherwise an ceonomical arranzeниенt.
Two Gornish rolln, with a crushing cappacity of 100 tonn a day, have been deliveres on the ground. The concentratorn and other machinery will arrive at an early dav, probably before they are neveled. The managers of this property have had the ores tented by the beat expertn in the west, and know exactly what they are doing-they are not making the ordinary mintake of guesning what procews in needed for maving values, to learn that they sueweed wrong, after the wanteful expenditure of thounande. Ans aerial tram, $\mathbf{2 s u n} 0$ feet int length will be conatructed this fall, for the delivery of ore from the working tannel month to the mill. It will be operated on the gravity nywtem, the londed buckets elevating the empties.
Timisere and lageing have been got ten out wniticient to lant all winter, another wime move that will wave the company much money. There are almo lowo cords of fuel word pited up convenient to the furmaces.

The Californin is now opened up with over one mile of underground workings. There are meven tunneln, all driven in on thes ledwe, the lower one being momething over 700 leet long and attaining a vertical depth of uns leet. They are connected by upraimen, affording the bent ventilation known to mining engineering.
With all thim work, there will, of courme, be no ditticulty in supplying the mill with ore for many months to come, even should no more work be done. But the policy of the company is said to be to block out ore budies at leant six months in edvance of the revinction plant, and with this in view, a full forew of miners will te kept constantly at work.
It is now entimated that the mill will the in operation by Jannary 1. These Minneamolis hustlers have already broken the eastern Oregon record in devel. ping a mine, and if they succestio their eflort to turn ont concentrates frons their own mill by Jasuary, they will have net a pace that fow will ever equal,
and perhaps none will nurpass. They bought the property ne reely fourteen monthy ago, when it was little more than prospected, with some surface work high up the mountain side. The greatent depth attained wan not more than 100 feet. The ore wan tree milling near the nurface and considerable gold wan taken out in a stamp mill on the property, but the oren became refractory at a depth of about 100 feet, the mill wan unelews and the inine abondoned for neveral yearn on that mecount. Now, an ntated above, there, in about one mile of workingn on one side of the mountain and no tunnel has gone leyond a point directly under the apex. The company owns ground on the other nide that can we worked for one-tenth of what it han cont to do development work, to the prowent time.
The Callforain is a mine, with hundreds of thousande of dollars worth of ore in sight, is being equipped with approved modern machinery and will at an early day be added to the lint of eantern Oregon's great gold producers.
Superintendent Walker wan in town a lay or two since. He sayn every preparation for all winter work has been perfected and that when the anow dinap. ueare next apring, he will have more ore in sight than any other two mines in Cable Cove district.

Inspectiog Malheur Oil Fields.
A special agent of the Interior department, attached to the Vnited Stater geological aurvey, was in Vale recently and vinited the oil filds to inventigate the claimn wet forth by prospectorn regarding the exemption of a large tract of land or mineral purpowen. He vinited the uroperty of the Hirnch syndicate, in Dry suleh, and made a complete inventignion of the character of the lands included in these locutions. After looking over Nand Hollow and the surrounding country, which is covered with oil locations, he reported that the landa in guestion are unfit for agricultural purmosen and that they are legitimately held mor the mineral law. The visit of hin npecial agent in understood to have Merulted from a petition signed by J. F Meikle and many others, who are heavily interosted in oil lands, and the mgent's inventigation will renult in the metting aside of a large tract of land for mining purponen, benides preventing the alert homeateader from retarding the development of the mineral resources of Malheur county.-Herald.

The Best is None Too Good For You And we can furnish yon with the aknr for no mure than you might pay for the wount, therefore, don't throw away good money for poor mervice, but if you are going eant, or have friende coning west, let us tell you what we can offer on Chicago, Washington, New York, Boston, Nt. Louis, Memphis, New Orleany and all intermediate points. Our rails are laid in fourteen different states of the Vhion. Communicate with us regarding freight and passenger business
pleasure to reply to your letter. pleasure to reply to your letter.
