

## THE OPPORTUNITY OF THE DAY SAFE, SOUND AND RELIABLE Forest Mining Company

(INCORPORATED)

The Great STORM KING Group of mines is now being developed by this company. These mines are situated in Cable Cove Mining District, fifteen miles north of Sumpter, Oregon. This group consists of Seven full claims, located upon four great parallel veins. This mammoth mineral zone is attracting the attention of the mining fraternity, and as development proceeds on this property, greater conditions continue to arise. Investigate and you will appreciate what we say. That this property will soon rank among the leading producers is doubted by none who have examined it. Mining men of wide reputation have, and are still purchasing stock in this company, and men, too, who are deeply interested in other mines in the near vicinity. The system of this company only needs to be known to be appreciated, and it is here where your money, if invested, will bring you returns with which you will be greatly pleased. Write for reports, prospectus and maps of this mine

### STORM KING GROUP.

#### Report of a Mining Superintendent on the Property.

The Storm King group, located in the Cable Cove section, fifteen miles north of Sumpter, and in the vicinity of such well known mines as the La Bellevue, Last Chance, Imperial, California, etc., will, according to the best authority obtainable, come into line as one of the big producing properties of its neighborhood.

This group is being developed by the Forest Mining company, which in turn is being financed by the Advance Mining company.

Sufficient ore of a satisfactory grade has been placed in sight to justify the company in preparing for extensive development, which will be prosecuted diligently from this time on.

Recently Captain A. M. Paul, superintendent of the Imperial mine, in the same vicinity, examined the property and his report is herewith given:

These properties are situated in the Cable Cove Mining District, about fifteen miles north of Sumpter, Oregon, and about one mile northwest of the Baby McKee mine, about two miles northwest of the Last Chance, the Alpine, the Imperial and the California mines.

The properties in this report consist of seven claims. The names of the seven claims being as follows: The Eureka and the Honest Dollar. These two claims are on the same vein. Adjoining these two claims and paralleling them on the northwest is another vein upon which there are two claims known

as the Jessie and Golden Rule. Adjoining the Jessie and Golden Rule and paralleling them on the northwest there is another vein upon which there are two claims, known as the Storm King and the Ozone. The last claim of this group lies to the northwest of the last named two and is adjoining them; this claim is the Shannon Bell.

In making my report I will commence with the two first named claims of the group, the Eureka and Honest Dollar. Development on these claims consists of a tunnel ninety-seven feet in length running along the course of the vein, showing two feet ten inches of ore in the top of the tunnel and a little over three feet in the bottom, with assays giving values of from \$9.68 to \$70.00 per ton in gold. About four hundred feet in a southwesterly direction there is a shaft on the vein ten feet deep, showing the vein to be from one to two inches wide on the surface and about twelve inches wide in the bottom of the shaft, in which assays give values of from \$9.76 to \$40.00 per ton in free milling gold ore.

This vein is exposed by small shafts and open cuts for a distance of fifteen hundred feet, and the course of this vein is north, ten degrees east, and the vein cuts the formation, showing it to be a true fissure, and the formation is granite. This vein shows in places a width of from ten to fifteen feet of mineralized matter, commonly called vein matter, but which is caused by hot solutions from below.

I will now pass to the Jessie and Golden Rule. There has been very little work done upon these two claims, there being one discovery shaft ten feet deep, showing ore on all sides of the shaft, and running in value of from \$4.00 upwards. It is my opinion that with development this, too, will prove valuable property.

The work on the Storm King and

Ozone consists of a tunnel near the point of discovery, and is driven along the vein for a distance of one hundred and eighty feet, showing ore all the way from the surface to the face of the tunnel, and averaging in width from six to eighteen inches. Three assays give the following values: \$12.50. This being a general sample taken from the dump. The other two assays are \$62.68 and \$79.08 respectively, this being the assorted ore for shipment. The course of this tunnel and vein are north, ten degrees west, and the vein cuts the trend of the formation obliquely (which is granite) and by driving this tunnel five or six hundred feet on its present course it will intersect a quartzite reef (which is running north, twenty degrees east) which would make this a contact vein between granite and quartzite, and should produce a large body of ore at the intersection of the contact.

The only work done upon the Shannon Bell, the last claim of this group, is the location work, and is not enough to allow of a report being made.

There is water for power purposes one mile from the property, and timber on the ground, of a very fine quality sufficient to run the mines for many years to come.

All the assays mentioned in this report were made by the assayer of the Imperial mine at my request, and the ore was taken by me from the properties mentioned.

I will state that I have been a practical miner since 1870, and am now the manager and superintendent of the Imperial mine in this district.

### SUSANVILLE CAMP.

#### Progress Being Made in Various Mines of That Vicinity.

Sam Hughes and James Sanderson have disclosed a six-inch vein of free milling ore at a depth of 50 feet which assays \$900 per ton. The entire ledge is 24 inches. The claim was formerly owned by James Stevenson, and lies on the north of the Badger mine and near the old stamp mill built by the Badger company.

The Badger company installed a new pump in the Bull of the Woods last week where they have a 20-foot ledge of high grade ore.

Wm. Cooper sold to N. C. Haskell, of Baker City, his one-half interest in the Monarch and Oreolo quartz claims. Ore from the former mine runs 25 cts., per pound. The consideration for the property was not learned.

A mining capitalist from Chicago is out at the Big creek placers prospecting them with a view of purchasing.

Chas. Graham and Heaton Bros. have begun work on the Daisy, which carries \$180 ore.

The Princess mine owned by the Smith brothers, has been sunk to a depth of 60 feet where a 4 foot ledge shows up in which gold is visible to the naked eye the entire width of the ledge. The owners have worked the claim for a number of years with but small success, however, one year ago Billy Morris, an oldtime miner, was put in charge of the work and the result is as stated.

#### Timber and Homestead Filings.

Timber and homestead filings, as well as final proofs, can be made before Charles H. Chance, United States commissioner, office in First Bank of Sumpter building, Sumpter, thus saving applicants expense of a trip to La Grande.
