A BUSINESS CONCERN
BUSINESS PRINCIPLES

Forest Mining Company

An investment in the stock of this company is better than an investment in Bonds. Two shifts of men now engaged sinking a shaft on the Storm King Group of Mines. The shaft is in ore all the way down.

Storm King Group, Cable Cove District, January 4th, 1903.

T. J. Costello,
President Forest Mining Co.

Dear Sir: Since our crew returned to work on the 26th of December, work has steadily progressed. We are now in better ore than we were when we laid off for Christmas. My last average sample assayed \$82.45 Gold; \$6.18 Silver, and 3 per cent Copper. The ore is now becoming more impregnated with Galena.

Respectfully,

J. L. CODY, Superintendent.

We solicit your thorough investigation of our system and methods.

NO STATE HAS BRIGHTER OUTLOOK

Wonderful Advance In Eastern Oregon Mines In 1902.

No state or political division of any kind on the Continent made such progress in mining last year as Oregon.

From the comparatively isolated and unknown mining field of a year or two ago the district is now one of the best known, as it is one of the most flourishing in the United States, and it is a very safe prediction that one year hence will show in a much more marked degree than this, advance in the way of specific returns.

The difficulty with Oregon up to this year had been that the mining interests were concentrated in the hands of a half dozen men, representing as many mines, all of whom had either accumulated a fortune or were rapidly doing so and who had no occasion to let it be known either what they were doing or what the enormous possibilities of the district were.

Fortunately a change came last year, and through the persistent efforts of some of the progressive papers of the eastern portion of the state, the merits of that vast 14,000 square miles of rich mineral territory began to be widely known.

It is to the credit of eastern capital, particularly that of New York capitalists, that a better idea of the resources of the country and the wonderful mineral wealth are now known to hundreds of

thousands of investors who had hardly realized that such a field existed, much less that it was then producing gold, which in proportion to development was actually making more money for the mine owners than any other district in the world.

Through the dissemination of good mining literature backed by the investment of large sums of money, a multitude of people last year heard of Oregon's gold mines.

As a result capitalists from all parts of the country investigated, bought, organized companies and started mining operations in the state which are only beginning to bear fruit.

A dozen different districts are the scenes of mining activity unprecedented in the history of the state. Sumpter, Cable Cove, Cracker Creek, Malheur and Greenhorn are only instances and each has its quota of phenomenally rich or promising properties. The Red Boy, an old-time favorite mine of the state, was incorporated with another property and inaugurated the policy of disposing of some of its stock.

Great enterprises were projected last year in Oregon—in mining, in power to carry on operations, in new lines of communication—largely due to mining capital enlisted from the great cities of New York and Philadelphia.

It was demonstrated that far and away the greatest paying individual mine in America or the world, the North Pole, was operated in eastern Oregon and that it was but one of a great series only waiting proper development. Much was accomplished in Oregon last year and no state in the Union has a more brilliant outlook for the present year of 1903.—Exchange.

ONE MILLION DOLLARS PROFIT.

The Amount An Eastern Oregon Mine Produced Last Year.

A profit of \$1,000,000 is declared to be the record of a single mine in eastern Oregon last year working with a ten-stamp mill.

Is it any wonder that eager eyes are turned toward that part of the country and capital is seeking admission?

For while this mine is a wonder in its way, those who know the section and are familiar with the gold fields of eastern Oregon are perfectly well aware that there are other mines which will do likewise.

It is an astounding fact never yet impugned that every mine ever yet operated with any degree of purpose and consistency has turned out a success—in many cases a phenomenal success.

The certainty of the field even more than its wonderful richness is what makes it attractive to a more "conservative" class of people.—North American Miner.

Something About Cyaniding.

Cyanide solution is powerless in the presence of antimony. One-tenth of 1 per cent of that metal taken up by the solution makes it worthless. Sulphuret of zinc is almost as bad. Copper carbonate in the ore makes necessary the use of sixty pounds solution to each per cent of such copper in the ore.

Low Cost of Mining and Milling.

Probably the lowest charges for mining and milling at depth on the mother lode in California are now being made in the operation of the Keystone mine at Amador, where the costs are about \$1.50 a ton. Water power and electric power are both used.

For Lowney's candies, fine chocolates, bon bons, Key West, Havana and domestic cigars, tobacco, pocket knives, stationery, cider, fruits, etc., do not fail to call at Sturgill's. Mill Street, near Granite.
