HOIST ORDERED

For Baby McKee and Machinery to be Here in a Month.

The Baby McKee is to have a hoist right away. The order has already been placed and the machinery is expected to arrive within the next thirty days. The consignment consists of a hoisting plant with a depth capacity of 500 feet and a seventy-five horse power boiler.

Superintendent L. G. Lilley, who was in the city yesterday gave out this information. The plant will be installed as soon as the machinery arrives. The Baby McKee is making an excellent showing in the way of development.

MAGNETIC LOCATOR.

Lost Ore Bodies Found by Means of Electricity.

E. J. Wallace, formerly of Butte, Montana, expert ore locator, arrived in the city last week and will probably make this his headquarters for some time. Mr. Wallace uses a magnetic device, fashioned somewhat after the manner of the old divining-rod used by the "water witch," and which it is claimed will locate bodies of almost any kind of ore regardless of depth. The theory of locating ore bodies by means of electricity, has been exploited by mining and scientific journals all over the country, and is now generally accepted. The device used by Mr. Wallace was originated by John Thomas, of New Hampshire,

and came into the former's possession several years ago. He has perfected it until it is now claimed that the locating of mineral deposits by this means is reduced to an exact science.

In addition to the magnetic locator, which will give the position of ore without revealing its depth underground, Mr. Wallace is also sole owner of Kester's electric tereometer which will show the depth of any deposit located by the former. The two instruments are used in conjunction. Mr. Wallace has been employed by Senator Clark and other prominent mining men in locating lost ore bodies.

Survey on Bosta Road.

The preliminary survey of the route of the Baker City-Oregon Wonder railroad is progressing at a rapid pace, and the two corps expect to meet next Tuesday, when the preliminary survey will be completed. We are informed that no very steep grades have been encountered on any part of the route. At both ends of the route they have made more than one survey, selecting the nearest, and over the lowest passes over the mountains. As soon as the preliminary survey is completed, the permanent and final survey will at once be commenced, which, it is calculated will require thirty days to complete. As soon as the permanent survey is well under way, grading will commence, also from both ends of the road. It is calculated that grading of the road can be started in about thirty days, perhaps before.—*Prairie City Miner.*

ELECTRIC-WATER COMPANY.

Will Spend \$200,000 in Improvements Here This Season.

Articles of incorporation were filed Saturday by the Sumpter Light and Water company, capital \$150,000. The principal office will be in the Empire State building of this city. R. E. Strahorn will be president, A. G. Smith, vice president, and E. J. Dyer, secretary and treasurer of the company.

The company will operate at Sumpter, Oregon, and proposes to consolidate the water works, which Mr. Strahorn has owned for four years, and the electric plant, which he purchased last summer. Heretofore the electric plant has been operated with steam power, but the company has obtained control of the water supply of Powder river and is building a mile and a half of flume and laying three miles of

pipe to bring it where it will be accessible to produce 500 horse power.

Mr. Strahorn said: "We water Sumpter by the best gravity system in this part of the country. We contemplate putting \$200,000 in the improvements of our holdings.

"Sumpter is enjoying a period of healthful prosperity. The improvements are of advantage to the electric company, which has been expending between \$500 and \$600 a month for fuel. The water works are being extended and about two miles of pipe are being laid, connecting with many of the new industries. The work planned is expected to be finished in sixty days."—*Spokesman-Review.*

Wanted.

Wanted—Position by first class hoist man and stationary engineer. Good references. Address X. Y. Z. care Miner. Sumpter, Oregon.

TWO WAYS

To get best results from your engine—use "EUREKA" or some other PACKING.

ONE SAFE WAY—always use "EUREKA". YOUR ENGINE

will work more economically

with a ROBERTSON-THOMPSON INDICATOR to adjust

the valves. A HINE ELIMINATOR keeps water out of the

cylinder and oil out of boiler,
