THE MIDWAY
SINKING PLANT.

Said To Be Second Largest
In State.

The sinking plant at the Midway, operated by the Geiser-Hendryx Investment company, is rapidly being installed. The boiler, however, has been delayed in transmission. The company states that it should have been here three weeks ago.

The depth capacity of the plant is 2,000 feet and when completed it will be the second largest sinking plant in the state. The double compartment shaft is now down sixty feet. The ledge shows a width of seventy-nine feet, carrying satisfactory ore values.

CELEBRATION AT BOURNE.

Miners' Union and Citizens Arrange for a Big Time Labor Day.

Bourne Miners' Union No. 42, W. F. of M., the business men and citizens of that town, have arranged for a grand Labor Day celebration on September 7th to be held at

Bourne, the center of the celebrated Cracker Creek mining district.

Bourne Miners' Union has let bids for a first class two story Union hall, to be dedicated on the evening of the above date with a grand ball. A committee of miners, citizens and business men met, and a good round sum was subscribed to guarantee a genuine good time. Appropriate contests, amusements and games, fitting the occasion, will be announced later.

Special Round Trip Rates.

Between June 4th and August 26th The Illinois Central will sell round trip tickets from Oregon and Washington points to Chicago, Cairo, Memphis and New Orleans at Greatly Reduced Rates.

Tickets good for three months. Going limit ten days. Returning limit ten days after starting west. Stop over privileges either way, west of the Missouri River.

Sale dates are arranged to be convenient for delegates to conventions of National Educational Association at Boston; Elks at Baltimore; Woodmen at Indianapolis; Eagles at New York; Shriners at Saratoga; Knights of Pythias at Louisville and Commercial Travelers at Indianapolis.

You can take your choice of Sixteen different routes. Write us. We will cheerfully give you any detailed information you want.

TO SINK ON LEDGE.

Jupiter Company Preparing To
Install Machinery At
Once.

The Grant County News says that for the first time in the history of this mining section the effect of depth on ore values is to be thoroughly tested. The Jupiter Gold Mining company, now operating the property familiarly known as the Prairie Diggings mine, is preparing to install new machinery, including a pump and hoisting works, for the purpose of deep sinking on the gold bearing ledge. The machinery is of the new and approved pattern, and the pump such as is used for sinking purposes, capable of handling all the water that finds its way into the shaft. The hoist is a powerful piece of machinery, with a good working capacity at a depth of 600 feet.

The shaft has a double compartment and is 7x9 in the clear. It will open a practical working outlet for over 100 tons of ore per day, and when finished and furn-

ished with stations in its great depths, the mine will be the best developed property this side of the Bonanza, which famous producer it is expected to rival.

A depth of seventy-five feet has already been reached and the ore shows up well. Down to that depth the water was successfully handled with the hydraulic pump, but that is found to be unadapted to deep mining and will be replaced by new and better methods.

It is possible that water from the mining ditch is contributing to the flow of water in the ledge, and if this proves to be the case, the tapped area will be flumed.

Manager Messner informs the News that as soon as the machinery arrives and is installed, the force of workmen will be increased and the development work pushed as rapidly as possible.

Back From California and Washington.

Professor Eberman returned a few days ago from a three weeks' business trip to California and Washington.
