

HIGHLAND STOCK

Will Advance On The
25th Day of November

The Advance is justified by the opening up of immense Ore Shoots.

Three Rich Ore Shoots

The third shoot of ore opened up in the Glasgo Drift has proved to be the

Rich Bannock Burn Shoot

It has been thoroughly developed now for a distance of 75 feet, showing rich, permanent and strong. It still continues in the face of the drift, and all indications lead us to believe that it will extend to a much greater length, probably throughout the entire length of the Bannock Burn claim.

Highland Is a Mine

We recommend the Highland to our most intimate friends and conservative investors. We stand ready at all times to prove the above assertion, and we should indeed like to have those contemplating the investing of money in a gold mine of proven value to come to the Sumpter District and examine the Highland property at our expense, or you may send any mining engineer you wish and we will pay his expenses and also his charges for making the examination. Is it possible for an investor to ask for anything more fair?

Personal Inspection by Others

A large number of business and professional men, residing in different parts of the Union, have made a personal examination of the Highland. After doing so they invested their money in Highland stock, feeling confident that the investment was safe and sure to be productive of large returns. This, far better than mere words can describe, demonstrates the confidence reposed by those who are familiar with the facts.

Is It Not Proof Enough

that the Highland is a mine, and that an investment in its stock will make you a large amount of money.

Justifiable Advance

With this ore shoot now opened up for a distance of over 75 feet, and every indication that it will extend to an immense length, Highland stock certainly has become more valuable. The advance is justified.

Location of The Highland

It is located on the famous Mother Lode System of veins in the Sumpter District, Eastern Oregon, with the Maxwell and Balsley-Elkhorn mines to the east and the North Pole, Columbia, E. and E. and Tabor Fraction to the west.

Order Shares Now

We will fill orders for stock at 10 cents per share up to and including the 25th day of November, 1903, after which date stock will be sold at the advanced price.
