MUST RAISE DAIRY CALVES

To Increase Number of Cows It is Advisable That Farmers Begin Raising Their Own.

If we are to increase the number of cows, as seems advisable, some farmers must raise calves of the dairy type. It is hoped that many farmers will decide to begin raising cows and producing dairy products. The first essential will be food for the family, then a surplus to sell, then soil fertility which will be possible where cows are kept.

AVOID FILTH IN CALF PENS

Important That Young Animal Have Clean Stall and Dry Bedding—Dirt Breeds Disease.

Many of the troubles that the calves of this country are heir to can be traced directly to unclean surroundings. The calf should have a clean, dry stall, clean pails from which to eat and clean, dry bedding all the time. Filth breeds disease more quickly in the calf pen than anywhere else.

Wind's Velocity.

It has been estimated that a gentle wind travels about five miles per hour, a high wind about 30 to 45 miles per hour, and a great hurricane 80 to 100 miles per hour. The velocity of the earth on its own axis exceeds, it is believed, 1,000 miles an hour. The velocity of the earth around the sun is calculated to be 66,000 miles per hour, and the velocity of the moon to be 2,273 miles per hour.

Lived in Poverty, Though Rich.

Abject poverty in the midst of riches was discovered at Atherstone, Warwickshire, England, a short time ago. When an aged widow who had been living alone was removed to the local workhouse, more than \$500 in gold and silver was discovered secreted in her house. In a tea caddy hidden under the bed was found nearly \$250, while another hoard included 79 sovereigns.

Be Explicit.

Many a salesman loses a sale because he expects to be understood. A salesman must not expect anything; he should be explicit if he don't want to be disappointed.

Poor Human Nature.

"A lot o' men," said Uncle Eben, "is fairly successful, only dey's jes' natchelly so dissatisfied dey won't admit it."
