**ALICE JOYCE**  
 Of all the reigning favorites of the early motion pictures, Alice Joyce alone shines as a star today. With such notable plays as Charles Klein's "The Lion and the Mouse" and "The Third Degree," the famous Drury Lane melodrama, "The Sporting Duchess," Rex Beach's story, "The Vengeance of Durand," and "Slaves of Pride" as her mediums, Miss Joyce has entered an era of steadily increasing popularity. She occupies a place among the rulers of the screen.

**TWENTY YEARS AGO**

Nobody swatted the fly.  
 Nobody had seen a slo.  
 Nobody had appendicitis.  
 Nobody wore white shoes.  
 Nobody wore a wrist watch.  
 Nobody sprayed the orchards.  
 Most young men owed livery bills.  
 Farmers came to town for their mail.  
 Nobody "listened in" on the telephone.  
 The hired girl drew one fifty a week and was happy.  
 The butcher "threw in" a piece of liver.  
 And the safety razor had not harvested the alfalfa from the face of the farmer.

**FIRST STATUE IN THE U. S.**

Jackson Memorial, Designed and Erected by Sculptor Who Started Life as Plasterer.

The Jackson statue, in Lafayette park, Washington, was the first equestrian statue unveiled in the United States. The famous statue of George III, which the New York patriots pulled down in 1776, was built before there was a United States. The Jackson statue was designed and erected by Clark Mills, a "self-made" sculptor, who started life as a plasterer. He had never seen an equestrian statue before he started work on this one, and the appliances for modeling and casting were made by him. The metal in the group is made of cannon captured by Jackson from the British.

The equipoise of the group is perfect, and no important balancing rods are used to keep the statue from toppling. Mills claims that he had so perfectly attained the center of gravity in the work that the group would balance perfectly on the hind feet of the rearing charger. This fact was proved, but when the statue was erected the hind feet of the horse were bolted, or otherwise fastened, to the base or pedestal, to secure it against the possible effects of high winds or other disturbing or mischievous causes.
