CARELESS POISONING COSTLY

Frequent Reports Made of Animals Gaining Access to Paint Boxes and Other Containers.

The danger of animals becoming poisoned through the careless use of poison material when spraying or baiting for insects, is pointed out by officials at the Ohio Experimental station, Wooster.

Every year reports are sent in of animals suddenly dying from securing access to paint boxes and poison containers.

Sometimes Paris green boxes, white lead or arsenate of lead containers are thrown into the trash pile or dump and animals get the poison from these.

Paint boxes, even though thinly coated, are licked by cattle because of the sweetish taste of the lead compounds.

Such boxes should be thoroughly cleaned with gasoline before using for farm walls, it is stated.

Materials most dangerous to live stock are Paris green, London purple, arsenate of lead, calcium arsenate, and any compounds of arsenic or zinc.
