When Byron B. Whitten, farmer of the West Union district failed to appear Sunday morning his aged father notified the neighbors. His body was found in the barn where he had gone early Saturday night to do some work. Whitten was a widower and lived with his aged father, who was blind.

LOCAL MAN ATTENDS CHEVROLET MEETING

Highly enthused over business prospects for the entire Portland Zone, Elmer Stipe of Stipe's Garage local Chevrolet dealer organization, returned to Beaverton today after attending a series of meetings held at Portland Wednesday and Thursday presided over by R. H. Grant, Vice-president in charge of sales of the Chevrolet Motor Company. Mr. Stipe was one of scores of Chevrolet dealers who visited Portland to attend the sessions.

The meeting at Portland was third of a series to be conducted throughout the Western Region. The 1929 gatherings are held in order that Chevrolet Motor Company may get its sales program directly before the 25,000 persons who make up its dealer and factory organization. The first of the meetings was held in New York some time ago and was presided over by Mr. Grant.

More than a carload of scenery, stage properties and special lighting equipment are necessary to the presentation of the sales program in each city. The services also are required of a specially trained crew of show men to direct the work behind the scenes so that from in front of the footlights the assembled dealers may witness the most impressive stage show ever sponsored by any manufacturer in the automobile business. Mr. Stipe is hearty in his opinion that a more interesting or instructive presentation would be virtually impossible to stage.

During the present year the Chevrolet Motor Company has laid out a sales program calling for the merchandising of 1,250,000 units, which is the greatest annual quota ever established by this, the world's largest, builder of automobiles. This is considerably in advance of the sales mark of 1928, which in itself set a record for the company up to that date.

While at Portland, Mr. Grant expressed himself as highly pleased at the very obvious prosperity that exists in the Oregon area. He pointed out that the rapidly expanding road-building programs, the increasing industrial activity and the rain and snowfall that presage bumper crops throughout the state have already promised and will continue to assure the most prosperous area this territory has known.

ALOHA CHURCH NOTES

The special services at the Aloha church are over for the present but not our enthusiasm for God. The work is going on with renewed interest and vigor.

The Sunday school awaits your attendance. Mr. Barker is superintendent.

We aim to make the morning services inspiring and instructive to all. The young people are invited to attend.

At 3:30 each Sunday afternoon the Junior B. Y. P. U. has its meeting. This organization is new but is doing a great work under the able leadership of Miss Helen Lindhall.

The Senior B. Y. P. U. service is held at 6:45. You will not wish to miss this meeting.

The subject for the morning services will be "The Unanswerable Question."

In the evening the pastor will speak on "Hearing and Heeding."

The pastor wishes to take this occasion to thank all in the community for their cooperation in the recent revival services. A spirit of fellowship and good will has prevailed throughout.

Electric Lamps Lure Moths to Their Death

Finding that from 30 to 50 per cent of the tomato crops in a certain district were ruined by grubs at the center of the fruit, a professor of the Entomological Institute in Switzerland had the happy thought of seeing whether the moths laying the eggs from which these larvae were hatched could be destroyed by electricity.

He installed eight electric lamps, varying from 80 to 200 watts, about three feet from the ground. The lamps were furnished with reflectors directed toward the soil, and underneath the lamps were placed basins filled with water on the top of which was poured a little petrol.

The plan proved highly successful. The moths, attracted and bewildered by the lights, were drowned by thousands in the bowls beneath the lamps, and as a result 80 acres yielded perfect fruit, while neighboring lots of land not so protected lost from 30 to 60 per cent of their crops.

The same method has been tried with equal success in connection with melon culture, and the fruit has been free from worms and graded as perfect.

Picture Depicts the First Forms of Life

Scientists generally agree that the first forms of life originated in water and an effort to illustrate this has been made in an oil painting by Charles R. Knight of New York, which has been placed in the hall of biological geology of the Field Museum of Natural History. The painting is a present by a patron of the institution. The artist gave a great deal of time to scientific investigation before making the painting. In it he has portrayed these earliest known forms of life as appearing in a group of pools. Within the waters of these pools algae of a blue-green hue are shown in such quantities as to tint the liquid with their colors. They also have built up a series of stony basins. In other pools cushion-shaped forms of pink algae are shown. Other portions of the deposits are seen to be tinged brown or orange by algae of the colors. The adjoining rocks are represented as being bare and naked, no other life being in existence at this time. The rocks are mostly of black lava, but some areas of a reddish color are shown to indicate the great iron-bearing deposits which were also formed at this time.

Fair Warning

When Viola Lawrence, Goldwin film editor, was first learning to drive her nifty coupe, she tied herself to the great open roads around Beverly. Crawling up one of these, she was horrified to see a turtle directly in her path. It was a hundred-foot boulevard, but VI didn't want to take any chances so she stopped the car, picked up the turtle and carried it across the road.

Next day, in about the same place, she saw the turtle again crossing the road, but in the opposite direction. "Turtle," she cried, feeling more confident of her steering ability, "you take your own chances, I'm not getting out today."—Los Angeles Times.

Solar System's Movement

The solar system is travelling at the rate of about 1,000,000 miles a day in the general direction of the constellation Hercules, or, more exactly, the boundary between Hercules and Lyra. The stars in these constellations are not all at the same distance from the solar system, and no fixed point can be set at which the sun will arrive at a specified time. Observations have not been continued over a long enough period to determine whether the sun is moving through space in a straight line or along a curved line.

Diet for Cats

Milk is not the best food for grown cats. It takes a great quantity to nourish them, and this distends the stomach, causes various sicknesses, and is wholly unnatural. The diet of a milk-fed cat should not be instantly changed to a meat diet. A sudden change of this sort may cause fits, because a cat fed on milk, gruel and vegetables probably has worms, and these rebel at a meat diet. A change of diet should be gradual, and follow a thorough treatment for worms. It is not the meat that causes fits, but worms.

Underground Wonders

The quantity of water underground beneath the crust of the earth's surface is nearly one-third the total volume of the oceanic waters, says a scientist who has just concluded investigations of buried rivers and caves.

The earth's ground water has been accumulating for countless ages and extends to great depths, perhaps six miles, and percolates slowly through the porous and jointed rocks to form a great system of underground drainage.

Matters of Weight

Elderly persons live longer according to some authorities. If they are thin. It is believed that young people will do better if they are slightly overweight. This gives a reserve of internal food to draw on for extreme exertions which are more frequent in the young. National health would benefit if young people were willing to slump and old people determined to be thin.

IMPROVED STAGE SERVICE to and from PORTLAND

For greater convenience tickets of Pacific Stages and the Silver Grays are now interchangeable. Tickets of one line are honored on stages of the other company.

For example, you can go to Portland on the Pacific Stages, return on the Silver Grays, using the same ticket. Schedules of these companies have been co-ordinated, too. By taking advantage of this combined service there is a stage to and from Portland every half hour throughout most of the day.

Slight readjustments in Silver Gray schedules have been made as follows (effective February 17):

TO PORTLAND - 6:05, 7:25, 8:25, 9:25, 10:25 a. m. and 1:25, 3:25, 4:25, 5:25, 7:25 p. m.
FROM PORTLAND - 7:25, 8:25, 9:25, 11:25 a. m. and 1:25, 2:25, 3:25, 4:25, 5:25, 9:25 p. m.

Take advantage of this new coordinated service. It is provided in order that you may have the most in motor coach transportation.
