GRANDHI'S CAMPAIGN

Nearly two thousand years ago Jesus of Nazareth exemplified in life a policy of non-violence in the effort to obtain great moral and social reform. He preached and lived according to the rule of love, and rejected the law of force, giving his life in token of his faith in the ultimate success of his method.

Recent events in India reveal that the non-violent campaign of Gandhi has achieved a success in the political realm which justified its pursuit there. Dissatisfied with their condition, thousands of Indians followed Gandhi's appeal and example for a non-violent rebellion. Many were killed by the police, more were beaten and wounded, thousands were arrested and sent to prison, but Gandhi and his followers have won more than open rebellion and fighting would ever have accomplished.

If, instead of passive resistance and economic pressure the Indians had revolted and inaugurated a violent revolution many more thousands would have died, with the chances that the British airplanes, artillery and tanks would have drowned open defiance in a pool of blood. On the other hand, by not buying British goods, by violating law and then going to jail, and similar non-violent methods, Gandhi and his followers have won great concessions.

Probably for the first time in history, as we know it, a people are winning political freedom by peaceful and non-violent revolt.

Pictures of Doom

When the proposal to pay the adjusted service certificates of the World War veterans came before Congress there were many prophets of terrible disaster if such a thing was done.

Chairman Arthur Reynolds, of a big Chicago bank, said that it would be like "a hypodermic of strychnine given to a sick man." Mr. Wooley, of the American Radiator and Standard Sanitary Corporation, said that the scheme would "wreck all chances of economic recovery."

Another prominent financier who advised against the plan was Chairman Charles E. Mitchell of the National City Bank of New York, who said that paying off the adjusted service certificates would cause "hundreds of bank failures" throughout the nation.

While Congress did not pass an act to pay all, it did increase the loan values to one-half. Therefore, if these financiers were correct, we should suffer a part of their pessimistic prophecies, at least! However, we doubt very seriously if any such terrible results will follow.

When it comes to mere talk the biggest crook in the nation can do it as well as the honest man. That ought to give you a fair idea of mere talking.

The trouble with some educators is the fact that the victim mistakes a few "isms" for real intelligence, and the trouble with most of the common herd is that they make the same mistake.

Now that Congress has voted "The Star Spangled Banner" the national anthem it might be a good idea to find somebody who can sing it.

Henry Ford is reported saying there is no prosperity unless all are prosperous. In that case, brother, there has been no prosperity.

REDUCE AND PROSPER

Alexander Legge, soon to retire as chairman of the Farm Board, gives good advice to the farmers in a statement in the Country Home. After pointing out the surplus in the supply of wheat, Mr. Legge takes note of the other crops:

"It seems to be hard for the farmer to realize he can make more by raising less. Of course, if the price is the same he will make more money when he raises 1,000 bushels than when he raises 800 bushels. But if he raises 1,000 bushels instead of 800 when 800 is all he can sell the price won't be the same.

"Look at the potato crop. The market can normally consume 400,000 bushels. If the farmers get a high price and make money. If they raise ten per cent more they have to accept a ruinous

price. Right now we have an illustration of the livestock industry. Hog production in recent years has been well balanced with demand. There have been no surpluses. There has been no overproduction.

tion of sheep and prices have collapsed.

"In 1923 the south produced 10,200,000 bales of cotton and sold it for \$1,600,000,000. That looked good for the cotton planter. If he made that much on 10,000,000 bales, what could he do with 12, 13, 14 million bales? So he kept increasing his crop until in 1926 he raised 18,000,000 bales. And for that he got a billion dollars—\$900,000,000 less than for a crop seventy-five per cent smaller.

"What must be done is to encourage the farmers to join their cooperatives and to encourage the local cooperatives to become affiliated with the national association. When a majority of the wheat growers belong, the farmers' marketing problem will be well on the way to a solution.

"Will the farmers join? That is the question and on its answer hinges the success of the whole plan. Other farmers have done it in other crops than wheat. Take the walnut growers. They control ninety per cent of their crop. And they sold their crop last year, in spite of all the depression, at the best price in its history. And this year's crop opened at a cent and a half higher than last year's."

PRODUCING GOOD

HATCHING EGGS

By Zella Wigent

Agricultural Extension Department
International Harvester Company

Many chicks are handicapped at the start by poor breeding and careless hatching.

Use hens for breeders, if possible. If pullets must be used select only those that are well matured and lay a good-sized egg.

Mate the hens two or three weeks before hatching eggs are to be saved.

When it comes to breeding, the male is the most important part of the flock. Select him with care. The male should be a good type for his breed; he should be free from blemishes; he should come from a high-producing egg strain; he should be vigorous; he should be a good feeder and a good fighter.

In general purpose breeds use one male to about 12 or 15 hens. In Leghorns use one male to every 25 hens.

The breeding hens should have plenty of room and should be on free range all the time. Breeders need sunlight.

They should have milk instead of meat scraps. The meat scraps should be eliminated entirely from their ration or at least cut down one-half.

Breeders should have plenty of green feed. Green feed means green-leaved plants, such as cabbage, lettuce, oat sprouts, or alfalfa flour.

Potatoes, mangels, and similar root crops do not count as green feed.

Without sunlight, milk and green feed it is impossible for breeding hens to store in the egg yolk the minerals and vitamins necessary to hatch vigorous chicks.

If the weather is cold, gather the hatching eggs often enough to prevent chilling.

Select eggs that weigh two ounces or more. They should be of good shape, color, and shell texture.

Do not wash the eggs intended for hatching.

Turn the eggs once a day. They can be kept in an egg case and the case given a quarter turn each day.

Keep the hatching eggs at a temperature of 50 or 55 degrees.

Do not hold the eggs more than a week or ten days.

Follow your incubator directions carefully being sure to keep the temperature and moisture conditions right.

VIEWS and REVIEWS

WHAT THEY SAY YESTERDAY OR TODAY

Queen Mary of Great Britain: "I like frocks of medium length that come just above the ankle."

Al Capone, reputed gang leader, Chicago: "I'm not going into the literary business. That would be cutting in on the work of the boys who are writing about me."

Dwight W. Morrow, U. S. Senator from New Jersey: "The only reason which inclines me to believe the stock boom is permanent is that none of the brokers think so."

J. B. Priestly, British author: "To me New York is the place where you are interviewed at 11 o'clock and get an indignant letter from a reader at twelve."

James J. Corbett, former heavyweight champion: "Health is a man's normal condition; he must do something foolish to lose it."

Will Rogers, humorist: "I bet after seeing us George Washington would sue us for calling him 'Father.'"

Elmer Rice, student: "Decency varies according to time and place, to conditions and social strata."

Paul Poiret, French fashion arbiter: "There is nothing reasonable in fashion."

William Allen White, publisher: "We have let the idea of freedom under self-respect go to seed in our colleges and are turning out too many hard-boiled hard-headed dumbbells."

Lord Darling, of England: "When I find how few people read my own books, I am convinced what good books they are."

J. Arthur Thomson, professor of natural history: "Apart from man's interferences, there is almost no disease in wild nature; throughout the animal world there is an exuberance of positive health."

E. W. Butterfield, Connecticut Commissioner of Education: "A child who feels beauty and creates it with crayon, needle or fabric may be school dull, but she is not bright."

Terry M. Townsall, doctor:

"The continued pauperization of the middle class, upon whom the physician is dependent, will drive us either to state medicine or to starvation."

ORCHARDISTS WARNED TO PREPARE FOR DRY WEATHER

With a serious deficiency in rainfall prevailing over the state, there are dry days ahead for Oregon orchardists who fail to prepare the soil now to conserve what moisture there is, says O. T. McWhorter, Oregon state college Extension horticulturist.

The weather station at Corvallis records a rainfall deficiency from September 1 to March 1 of 13.7 inches and conditions are similar throughout the state. Even if the precipitation for the remainder of the year is normal lack of moisture is liable to be a serious problem, McWhorter believes. In many Willamette valley areas the soil is reported as being dry three feet down now, an exceptionally low moisture reservoir for this time of the year.

Some of the moisture conservation practices recommended for orchardists include the plowing or disking under of cover crops as soon as the ground is dry enough to work without damage from puddling. Every day these crops are left standing constitutes an additional drain on the moisture supply. If plowing and disking is followed immediately by working the soil to the proper condition more moisture will be conserved.

NEW MOTOR VEHICLE LAWS GO INTO EFFECT JUNE 6

New laws affecting motor vehicle operation will go into effect on June 6th, which is the end of the constitutional 90-day period following the close of the legislative session. Exceptions are the law on the examination of drivers which will become effective on the first of July, and the formation of the state police, effective on the first of August.

The principal changes in the rules of the road, effective in June, are the new speed regulations; the change in the arm signaling system, and the right-of-way privileges at intersections. "All of these changes are important," says Secretary of State Hal Hass "and from time to time it will be the purpose of my office to send out information to the public covering each of these specific phases of the new laws."

People usually attach to business the degree of importance that the business gives to itself. When the merchant has little to say about himself or the services or commodities he has for sale then the public also attaches little importance to his business. That is why advertising is a valuable instrument in business and the reason no business can afford to be without it—Colorado Editor.

LIQUID OR TABLETS

Cure Colds, Headaches, Fever

666 SALVE

CURES BABY'S COLD

The BEST Gray Hair Remedy is Home Made

To half pint of water add one ounce bay rum, a small box of Barbo Compound and one-fourth ounce of glycerine. Any drugist can put this up or you can mix it at home at very little cost. Apply to the hair twice a week until the desired shade is obtained. It will gradually darken streaked, faded or gray hair and make it soft and glossy. Barbo will not color the scalp, is not sticky or greasy and does not rub off.

666 SALVE FOR BABIES

In a widely quoted editorial, selected by the National Editorial Association and sent out to its large membership the following paragraph occurs: "Our government was founded on the principle that the government out not try to do for the people the things which they can best do for themselves. We prospered and grew into a great nation by the application of these principles. And yet, despite the fact that they are still held by the great majority of the American people,

there is constant agitation on the part of a well organized minority to make the people wards of the government, by constantly increasing the power and authority of the federal government over business with the evident aim of building up a paternalistic government in the United States."

A political platform is an arrangement similar to a street car platform. It is not made to stand on but only to get in on.

More than 73,000 miles in a New Ford

THE substantial worth of the new Ford is reflected in its good performance, economy and reliability. Its stamina and endurance are particularly apparent in sections where bad roads and severe weather put a heavy extra burden on the automobile.

In less than a year a new Ford Tudor Sedan was driven more than seventy-three thousand miles over a difficult route. The operating cost per mile was very low and practically the only expense for repairs was for new piston rings and a new bearing for the generator.

The car carried an average load of 1200 pounds of mail and was driven 250 miles daily. "The Ford has never failed to go when I was ready," writes one of the three mail carriers operating the car. "The starter did the trick last winter even at 34 degrees below zero. The gas runs about 20 miles per gallon. At times I pull a trailer whenever I have a bulky load."

Many other Ford owners report the same satisfactory performance. Every part has been made to endure—to serve you faithfully and well for many thousands of miles.

THE NEW FORD
TUDOR SEDAN

LOW PRICES OF FORD CARS

\$430 to \$630

F. O. B. Detroit, plus freight and delivery. Bumpers and spare tire extra at small cost. You can buy a Ford for a small down payment on a convenient financing plan. See your Ford dealer for details.

FEATURES OF THE NEW FORD

Attractive lines and colors, rich, long-wearing upholstery, sturdy steel body construction, Triplex shutter-proof glass windshield, silent, fully enclosed four-wheel brakes, four Houdaille double-acting hydraulic shock absorbers, aluminum pistons, chrome silicon alloy valves, torque-tube drive, three-quarter floating rear axle, more than twenty ball and roller bearings, and bright, colorless Rayonite finish are many exterior and interior features. In addition you now enjoy delivery business of the last few years of the best low cost of operation and upkeep and low yearly depreciation.
