Church Services

CHURCH OF CHRIST REV. G. W. SPRINGER

There was a great deal of joy in the Sunday School last Sunday when the devil was pulled across the line by the church in the "Tug o' War" contest. If every member of the school will put forth an effort we will keep the "Arch enemy" across the line.

A large crowd attended the picnic of the Sunday School on the Tualatin river last Saturday. A splendid program followed a delicious dinner. Contests, swimming, boating, and all around good fellowship composed the entertainment. If you were among the unfortunate who could not attend make it up next year.

Mr. and Mrs. E. O. Farrow who recently returned from Africa presented a program in the Church Tuesday evening. The outstanding advancement in the missionary effort of Africa is the education of natives to evangelize and to carry the gospel into the interior of the continent. An American unaccustomed to the habits, unfamiliar with the language and endangered by the climate cannot have the influence with the natives who are practically uncivilized, that a native himself can have. The particular work of the Farrowes in Africa was the training and educating of natives who are later sent into the interior to these uncivilized tribes, as missionaries.

One can readily see the wisdom of these more recent methods. A large number attended the program and the ladies served light refreshments in the basement at the conclusion.

The topics of the sermons next Sunday will be "The Peace-maker" in the morning and "After Death, What?" in the evening.

BETHEL CONGREGATIONAL
CHARLES F. CLARKE, Pastor

It corrodes the needle valve in the carburetor, corrodes and gums motor valves, attacks bearings, pistons, cylinders and crankcase—eats metal wherever it contacts it.

You see the evidence in increasing gasoline consumption, gradual loss of motor pep, reduced power, and

repair and upkeep costs, a good part of which are directly traceable to the effects of acid-gasoline.

Bear in mind, acids are not put into gasoline—they are there originally and their complete removal is one of the most perplexing problems of refining.

ANY GASOLINE (WHITE OR COLORED) MAY CONTAIN THESE METAL-EATING ACIDS WITHOUT YOUR KNOWING IT . . . UNLESS IT IS VIOLET-COLORED

VIOLET RAY ACID-FREE GASOLINE

Its violet color is the guarantee of Science to you that it contains no injurious acids as the slightest presence of naphthenic or sulphur-bearing acids would destroy its violet color and turn the gasoline back to white.

All acids are removed from Violet Ray gasoline by the exclusive Violet Ray process of refining which is protected by seven U. S. patents.

Violet Ray is the only gasoline sold on the Pacific Coast which is refined by this patented acid-eliminating process. The patents are owned and controlled by General Petroleum Corporation.

Thousands of motorists who have never before realized how simple and easy it is to avoid the penalty of acid gasoline, are turning to Violet Ray, the acid-free gasoline.
