

FARM Gossip

Property owners here should not fail to appreciate the civic value of clean premises and attractive buildings. Unsanitary yards and neglected houses make an unattractive, uninviting community.

Pretty gardens and up-to-date buildings proclaim enterprise, pride, and good citizenship. A town or city is thus inevitably stamped by the manner in which its citizens maintain their property.

While we may exceed the average in attractiveness, nevertheless there are any number of yards and structures in our midst which could be made more attractive if the owners would spend a relatively small amount of money on them. It is not necessary, for example, to landscape every plot of ground. Very often it is enough to clean up the premises, remove trash and unsightly objects to that the whole will present a well cared for appearance.

As for buildings, some small defect or decayed portion mars the effect of the whole and could be remedied with very little trouble or expense.

This year citizens should find a strong argument for making such minor repairs and adjustments as may be necessary. Millions of unemployed throughout the United States would feel the effect if every property owner would make some small improvement in grounds or buildings. Moreover, the property owner would be doing something in his own interest, to the enhancement of the general appearance of his home town and, at the same time, provide a little bit of work for some artisan in need of employment. Surely, such a threefold opportunity should be taken advantage of.

Debt-Free Farmer Lucky

"It may seem a queer thing to say that farmers are fortunate just now, when all the commodities they have to sell are greatly reduced in price, yet nevertheless it is true," remarked C. E. Brehm, assistant director of the Tennessee Extension Service.

"The man who owns his own farm without a mortgage on it is a really lucky man. He is certain of a roof over his head; he has his fuel, he has a good living for himself and his family, and he is far better off financially than the people in other vocations. Even the man who has his farm mortgaged is in better shape than other people, for nobody wants to take his property over under present conditions.

"The man who owns his own farm debt-free is the most fortunate average man in the world today. There is always the opportunity on a farm for good living, and this is the simple fundamental principle which should come first in the plan of every farmer. Potatoes, tomatoes, beans, meat, eggs, dairy products, these are all to be had. Ten years ago a man could raise a crop of cotton or tobacco and buy food-stuffs for his family. He figured that it was cheaper to buy it than

to raise it. Those days are gone, at least for awhile."

Ice Lasts Long

A new refrigerator which uses only one chunk of ice in the whole summer has been built at the Iowa State college. It consists of two tanks, one within the other, with sawdust insulation between the walls. A solid chunk of ice, six feet high and six feet in diameter, is frozen in the inner tank, which, with proper insulation, lasts from spring to September. It is especially desirable for farmers and residents of small towns.

Speed comes high, is the conclusion of the Chicago Motor club. According to an exhaustive study, it is three to four times more expensive to run an automobile at the rate of 60 miles an hour than at from 40 to 45 miles.

The conclusion arrived at by the Chicago Motor club are as follows: Oil consumption at 55 miles per hour is 7 times greater than it is at 30.

Tire wear at 50 is twice as much as at 40.

Gasoline consumption at 55 is one-fourth more than at 30.

At the higher speeds there is also greater wear and tear on the car.

Observations of a Loafer

YESTERDAY

The flowers that bloom in the spring, tra la,
Had better be hiding their heads, tra la.
For the rain comes down, and the wind doth blow,
And winter is back on a visit, ho! ho!

TO-DAY

The bluebells that bloom in the spring, tra la,
Are ringing a welcome to summer, tra la.
For the sun comes down, the day's without flaw,
And summer is here on a visit, ha! ha!

AND FOREVER

On winter rains and summer sun
In never failing cycles run
To teach us beauty, tune our praise
To Him who guides in endless days.

intend to flunk you.

"Did you hear that the \$2,500,000 raised in Chicago for political conventions has been generously turned over to the teachers' fund?" "Ugh, uh." "Neither have I."

Consider the ungallantry of Adam.

"The woman whom thou gavest to be with me, she gave me of the tree, and I did eat." Even the bloody Macbeth was man enough to recoil, before his misdeed.

The record clearly implies that sinner Adam greedily grabbed the fruit, saying, "Thanks, Eve, I was on my way to that tree." Talk about Eve being the tempter! Her blunder consisted in allowing herself to go in conference with a sleek-tongued serpent.

Rip Van Winkle is recuperating from a severe cold.

History as she really was: As Richard the Lion Hearted and his bold knights pranced down Rotten Row and paused for the lowering of the draw bridge, Mrs. Plantagenet thrust her flushed face from an upper embrasure in the donjon keep and shrieked in profane Anglo-Saxon "Jump right down off that moth-eaten omelet, thou sheep livered loaf-

er, and split me some wood, or thou eatest no roasted boar for dinner. I want to catch the next barge down to Camelot. Get a wiggle on thyself!" "Hy mine empty demijohn," quoth Dick, who was absolutely void of a sense of humor, "I shall get a cr-vorce. Headsman, do thy stuff."

Her highness fainted, fell over into the moat below and was drowned, and thus averted another royal tragedy.

Housewives and Scientists

THE twenty-fifth Annual Convention of the National Canners Association, held in Chicago this year, proved beyond a doubt that the two main dependencies of the canning industry are still housewives and scientists. This is not as incongruous as it seems, since a housewife may well be a scientist in these modern times, and women certainly depend on scientists to a vast extent to safeguard their health and that of their families.

That this confidence is not misplaced in connection with the canning industry is proved by the fact that even before the passage of the Pure Food Law twenty-five years ago the industry was depending upon scientists to keep it straight, that it helped the late Dr. Harvey W. Wiley to pass the Pure Food Law, and that it originated and fostered the passage of the McNary Mapes amendment to the Pure Food Law which informs the housewife about the quality of food which she is buying in addition to the protection of perfect purity afforded by the original law.

Many Scientists Spoke

If any additional evidence were needed of the determination of the whole canning industry to make its products as wholesome and good as is humanly possible, it would be afforded by the character of the scientists who spoke at the various sessions of the Convention in Chicago. In addressing a session on home economics, Miss Frances L. Swain, President of the American Home Economics Association and Director of Household Arts in the Chicago City Schools, said:

"We know that we can trust what canners tell us because of the high standing of the scientists who do their work."

Among these scientists who addressed the Convention were the following men from great universities: Walter H. Eddy of Columbia University, New York City, F. C. Gaylord and J. H. MacGillivray of Purdue University

and D. M. Doty of the Purdue University Experiment Station at Lafayette, Ind., E. R. Lancashire of Ohio State University, Columbus, Ohio, and J. C. Walker of the University of Wisconsin at Madison.

The Research Departments

Still other scientists who spoke came from the research laboratories of the Association and of the largest can manufacturing companies. In speaking of their work Theresa A. Clow, Director of the Harriet Hammond McCormick Memorial in Chicago, said:

"In institutional buying for a large number of people the only advertising which we use is the reports which are sent to us from the research departments of the industry."

The men from the Research Laboratories of the National Canners Association, Washington, D. C., who spoke at the Convention were W. D. Bigelow, Director, E. F. Kohman, J. R. Eby, Director of the Western Branch Laboratory in San Francisco, Charles G. Woodbury, Director of Raw Products Research, H. R. Smith and E. J. Cameron. The men from the Research Division of the American Can Company who delivered addresses were R. H. Winters, L. G. Weiner, R. S. Scull, C. W. Curry and D. F. Sampson. Those from the Research Department of the Continental Can Company were W. H. Harrison, Director, C. H. Bloedorn, L. F. Pratt, G. V. Hallman and A. E. Stevenson.

Government Authorities, Too

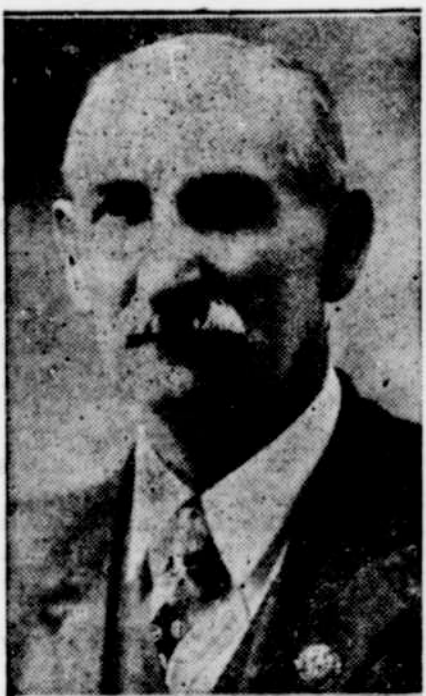

But this is not the whole tale

of trained scientists who contributed their knowledge at this Convention. National and State governments also sent their men. These included Karl F. Kellerman, Associate Chief of the Bureau of Plant Industry and William E. Lewis of the Bureau of Agricultural Economics of the United States Department of Agriculture, R. S. Hollingshead, Assistant Chief of the Foodstuffs Division of the United States Department of Commerce, Carl S. Pederson and C. B. Sayre of the New York Agricultural Experiment Station, Geneva, N. Y., and A. W. Pomeroy of the Wisconsin Department of Agriculture and Markets, Madison, Wis.

Many Housewives Heard From

With all these scientists speaking about the proper production, processing and safeguarding of canned foods, the housewife's viewpoint was presented by a group of women whose wide contact with many housewives has transformed them into a sort of distilled essence of the universal American housewife.

Those who spoke on what the housewife expects in canned foods and wants to know about them were Miss Alice Blinn of the Delinette, New York City, Ruth Atwater, Director of the Home Economics Division of the National Canners Association, Frances L. Swain, President of the American Home Economics Association and Director of Household Arts in the Chicago City Schools, Sybil Woodruff, Associate Professor of Foods, University of Illinois, Faith McAuley, Department of Institutional Administration, University of Chicago, Theresa A. Clow, Director of the Harriet Hammond McCormick Memorial in Chicago, Mrs. Wilbur E. Fribble, Chairman of the American Home Department of the Illinois Federation of Women's Clubs, and Miss Lita Bane of the Ladies' Home Journal, Philadelphia, Pa.

J. M. HIATT

FOR COUNTY COMMISSIONER

To the Voters of Washington County: I hereby announce my candidacy for re-election to the office of County Commissioner of Washington County at the Primary Election to be held on May 20, 1932. If I am elected I will endeavor to continue the same careful, conservative and faithful administration of the affairs of Washington County that has been my policy in the past.
